April 10th Summary of the Inspector's Report on the School:-

"The new School room appears to be well built and will undoubtedly prove a great boon to the parish. The scholars are in satisfactory order and have on the whole passed fairly in the Elementary subjects: although there are some scattered elements of weakness, among which the spelling of the second and third Standards is prominent. The Recitation is very fair: but the Grammar and Geography are much below par. The children of the second Standard have however done fairly in the latter subject. The Girls' Needlework is another point to which more attention might with advantage be directed. The most successful feature of the work of the school is the singing by note according to the Tonic-Sol-fa System, in which the children of the upper standards display considerable proficiency."

"The Infants have received a fair share of attention, although the children under

1885

under six years of age are backward in writing and in their knowledge of Number."

S. E. Leslie is continued under article 84.
