

“AdvanceHE

+ Equality in higher education

Staff statistical report 2024

Advance HE was formed in March 2018, following the merger of the Equality Challenge Unit, the Higher Education Academy and the Leadership Foundation for Higher Education.

Our purpose is to advance the professional practice of higher education to improve outcomes for the benefit of students, staff and society. Advance HE has been created to be “of and for the sector” and is jointly owned by GuildHE and Universities UK.

We are driven by the strategic needs of higher education. Through our passion for excellence we aim to create an inclusive culture that champions the continuous development of teaching, leadership and research. We use an evidence-based approach to identify what works, and develop practice-based solutions.

Our vision is that the world-class reputation and standing of higher education is enhanced and recognised for transforming lives, enriching society and developing the economy for the better.

Introduction

This is the 17th national staff equality data report for higher education institutions (HEIs). It aims to assist the sector in better understanding the main equality challenges for staff and directing future efforts to overcome them.

This report presents a snapshot of the age, disability, ethnicity and sex of the higher education (HE) workforce in the academic year 2022/23, as well as on the intersections of these identities (for example, Black female professors, disabled male senior managers, etc). In addition, our report presents high-level findings on institutional collection and return rates of staff trans status, religion and belief and sexual orientation data.

The report provides national figures which can be used:

- = to consider the diversity and inclusivity of the HE workforce as a whole
- = to consider change and progress over time
- = by individual institutions for benchmarking purposes.

Changes to the reports over time

In 2016, Advance HE (formerly Equality Challenge Unit) undertook a review of its annual statistical reports and redeveloped them to present high-level findings, with further details provided in an accompanying set of **Online data tables**. These tables cover more detailed information, for example, breakdowns by 5-year age bands, impairment type, or ethnic group. The online data tables also include information previously published as part of our Athena SWAN benchmarking resource. We encourage readers to use this report as a starting point for further examination of the data available in the accompanying Excel tables. Throughout the report, it is noted under each table if more detailed information is available in the Excel tables.

Starting with the 2022 report, the section previously labelled as gender has been changed to sex, to better align with **Advance HE's guidance on the collection of diversity monitoring data**, as well as the recommended phrasing of the question used by HESA (i.e. 'What is your sex?') and the relevant available fixed response options (i.e. 'Female', 'Male' and 'Other'). Alongside this change, we have included two versions of selected tables on staff sex, the first presenting data for female and male staff only (to allow for direct comparisons with data presented in previous reports), while the second presents data for all three response options available.

The section entitled 'New protected characteristics' in previous reports has been renamed 'Experimental data.' This name was chosen because the returns of data presented in this section are not compulsory for institutions and thus differ in quality from data presented in other report sections. The characteristics included in this section remain the same.

The language used to describe staff and students whose gender identity is different from their sex assigned at birth has been adapted to the umbrella term trans. This is to avoid confusion with the section on sex, but also better reflects the nature of data collected by HESA through the relevant fields. More details on this change are provided in the definition below in the 'About the data' section.

An illustrated guide on how to use this report can be found in the **How to use this report** section.

Online data tables

To help users access and analyse our data, all data tables presented in this report are available for download in Excel format. Where appropriate, these tables provide additional detail to those in this report. This includes further disaggregation by: detailed age bands, impairment type, ethnic group, or subject area.

Year-on-year comparisons

To see complete data from 2021/22, please see Advance HE's previous statistical report on staff in HE. <https://advance-he.ac.uk/knowledge-hub/equality-higher-education-statistical-reports-2023>

Heidi Plus

Additional data collected by the Higher Educational Statistical Agency (HESA) can be accessed via 'Heidi Plus', a web-based management information service run by Jisc for HEIs and approved HE stakeholder organisations. The database provides easy access to a wide range of national quantitative data about HE, and includes built-in functionalities for analysis, presentation and cross-institutional comparisons as well as sophisticated visualisations.

Heidi Plus allows users to manipulate the data available to compare their institutions' performance with that of other individual institutions and/or institutional groupings, such as within sector groups, national or regional areas.

For further information, see www.jisc.ac.uk/heidi-plus.

Definitions

A list of definitions and notes about the data precedes the body of this report to clarify some of the terms used and how the data has been presented.

Please note: in 2012/13, a number of fields in the HESA staff record were either modified or discontinued. As a result, data concerning academic and professional and support staff; sex or gender; departments; professorial status; and senior management status are not comparable to data prior to 2012/13. Additional detail is provided in the **About the data** section.

How to use this report

This indicates that percentages should be read **vertically** eg within an ethnic group, the percentage of staff in a salary range.

This indicates that percentages should be read **horizontally** eg within a salary range, the percentage of staff in an ethnic group.

Additional resources

It is important to note that the equality monitoring information that institutions supply to HESA is not the only source of relevant data available within an institution. For example, institutions will also collect equality monitoring information via staff surveys, involvement activities and HR records.

We have published guidance on collecting diversity monitoring data, including a set of relevant questions to be used, which is available at: **www.advance-he.ac.uk/knowledge-hub/guidance-collection-diversity-monitoring-data**

Advance HE has also put together a series of handbooks for governors of institutions in the UK to provide practical guidance on integrating equality and diversity into an institution's mission, strategy and culture. The individual handbooks are available online at:

www.advance-he.ac.uk/knowledge-hub/equality-handbooks-governors

Using the national figures within this report alongside institutional figures, qualitative data and information gathered from other sources will give institutions a fuller picture of equality in their institution, allowing them to set relevant evidence-based outcomes and objectives.

A number of recent publications from Advance HE provide useful additional information in further detail:

Advance HE (2024). **New initiatives to advance gender and race equality in HE showcased in good practice database.**

Advance HE (2024). **Enabling and empowering ourselves and others in change and uncertainty.**

For guidance on using data and evidence, visit: www.advance-he.ac.uk/guidance/equality-diversity-and-inclusion/using-data-and-evidence.

About the data

The analysis in this report is based upon data drawn from the HESA staff records between 2003/04 and 2022/23. As previously mentioned, due to changes HESA implemented in 2012/13, some information is not comparable to previous reports.

This record covers all academic and professional and support staff holding one or more contracts of employment within a UK HEI. The analysis presented here is based on a small selection of the large amount of data available from HESA.

This does not include staff on consultancy contracts or atypical staff. The term 'atypical' is used to describe working arrangements that are not permanent, involve complex employment relationships and/or work away from the supervision of the normal work provider.

It is worth noting that prior to 2018/19, the staff record included all publicly funded HE providers in the UK and the University of Buckingham. From 2019/20, coverage expanded to include all English providers registered with the Office for Students in the approved (fee cap) category (including alternative providers), and all publicly funded HE providers in Northern Ireland, Scotland and Wales. At present, there are 211 HE providers covered by the 2022/23 staff record. Note that this differs from the coverage on HeidiPlus and the HESA website, where alternate providers and specific groups of staff are sometimes presented separately.

Counts of staff represent counts of full person equivalents (FPE). This is to allow for the fact that individuals can hold more than one contract within an institution and each contract may involve more than one activity. FPEs are calculated by dividing staff counts among their activities in proportion to the declared full-time equivalent for each activity. Staff FPE counts are calculated on the basis of contract activities that were active on 1 December of the reporting period. All counts of staff have been rounded to the nearest five in accordance with **HESA's rounding and suppression methodology** in order to protect the confidentiality of individuals. As totals have also been rounded based on unrounded values, some may be higher or lower than the individual count numbers presented in the report.

Percentages are based on known staff data and calculated from unrounded data. Throughout the report, "." represents a percentage calculated on a population of between 0 and 22.5 inclusive. Again, following HESA's rounding and suppression methodology, these percentages have been suppressed to protect against over-interpretation of small numbers. Averages based on seven or fewer staff members have also been suppressed for this reason.

Age

This report uses the following age categories and is calculated at 31 August in the reporting year:

- = 25 and under
- = 26 to 30
- = 31 to 35
- = 36 to 40
- = 41 to 45
- = 46 to 50
- = 51 to 55
- = 56 to 60
- = 61 to 65
- = 66 and over

In some cases, these categories have been aggregated.

Disability

Disability status (as recorded by HESA) indicates whether an individual is disabled based on their own self-assessment. Data collected from the relevant HESA records are grouped in the following way:

- = **Known disability status** includes individuals that reported that they have or do not have a known disability.
- = **Known to be disabled** includes individuals that reported a disability.
- = **No known disability** includes individuals that reported they have no known disability.
- = **Unknown** includes those members of staff that were reported as 'information refused' or 'not available'. This can occur, for example, if the staff member did not respond to the request for information.

This report uses the term 'disabled' to refer to individuals who identified as disabled on their HESA staff record. From 2012 onwards, 'non-disabled' refers to individuals who have indicated that they are not disabled, or whose disability status is unknown by their institution. This aligns with changes to HESA reporting standards in 2012.

Prior to 2012/13

'Non-disabled staff' figures did not include staff whose disability status was unknown by their institution; this group therefore constituted a smaller proportion of the staff population and, conversely, 'disabled staff' a larger proportion. As a result, the percentage of staff in the disabled category may represent a slight undercount compared with how it was reported prior to our 2013 report.

Impairment type

For the 2022/23 staff record, impairment type was recorded on the basis of self-assessment using one of 10 possible categories:

- = No known impairment, health condition or learning difference
- = Blind or have a visual impairment uncorrected by glasses
- = D/deaf or have a hearing impairment
- = Development condition that you have had since childhood which affects motor, cognitive, social and emotional skills, and speech and language
- = Learning difference such as dyslexia, dyspraxia or AD(H)D
- = Long-term illness or health condition such as cancer, HIV, diabetes, chronic heart disease, or epilepsy
- = Mental health condition, challenge or disorder, such as depression, schizophrenia or anxiety
- = Physical impairment (a condition that substantially limits one or more basic physical activities such as walking, climbing stairs, lifting or carrying)
- = Social/communication conditions such as a speech and language impairment or an autistic spectrum condition
- = An impairment, health condition or learning difference not listed above

Staff had the option to select all the categories that applied to them from the above 10 options, thus enabling them to report multiple impairments or disabilities.

For further information on monitoring disability and impairment type, see www.advance-he.ac.uk/knowledge-hub/guidance-collection-diversity-monitoring-data.

Prior to 2022/23

Impairment type was recorded within the HESA staff record on the basis of self-assessment using one of 13 possible categories:

- = No known disability
- = Blind or a serious visual impairment uncorrected by glasses
- = Deaf or serious hearing impairment
- = General learning disability such as Downs syndrome
- = A long standing illness or health condition such as cancer, HIV, diabetes, chronic heart disease, or epilepsy
- = A mental health condition, such as depression, schizophrenia or anxiety disorder
- = A physical impairment or mobility issues, such as difficulty using arms or using a wheelchair or crutches
- = A social/communication impairment such as Aspergers syndrome/other autistic spectrum disorder
- = A specific learning difficulty such as dyslexia, dyspraxia or AD(H)D
- = Two or more impairments and/or disabling medical conditions
- = A disability, impairment or medical condition that is not listed above.

Ethnicity

Ethnicity within the HESA staff record is based upon the 2021 census classification system in England and Wales. Where possible, ethnicity data are presented at the disaggregated level. However, where necessary, the census categories have been aggregated into six groups:

- = Asian – Asian/Asian British: Bangladeshi, Indian, Pakistani, and any other Asian background
- = Black – Black/Black British: African, Caribbean, and any other Black background
- = Chinese
- = Mixed
- = Other ethnic background (including Arab)
- = White – all White ethnic groups including White British.

Chinese staff are presented separately from Asian staff to enable comparability with both our previous staff reports, as well as with our student reports.

Prior to 2012/13

From 2012/13 Arab was added to the coding frame for staff ethnicity. Where ethnicity is aggregated as above, Arab has been grouped into Other ethnic background.

There are a number of issues inherent in grouping individuals into larger categories. Firstly, the data presented does not allow for a more nuanced or in-depth understanding of the characteristics of staff from sub-groups within each ethnic group presented. Advance HE's statistical reports aim to convey detailed information about the diversity characteristics of staff in the most detailed form possible, while taking into account considerations of available data and the format of presentation. For this reason, where the numbers are large enough, analyses are reported in more detailed groupings. Further breakdowns can be found in the **Online data tables**. When small numbers do not allow for analysis by detailed ethnicity, the groups used as categories for presentation reflect those collected by HESA, and used in research and benchmarking across the HE sector.

BAME

BAME stands for Black, Asian and minority ethnic.

This definition is widely recognised and used to identify patterns of marginalisation and segregation caused by attitudes toward an individual's ethnicity. Advance HE recognises the limitations of this acronym, particularly:

- = The assumption that minority ethnic staff are a homogenous group.
- = The acronym's function as a label to describe minority ethnic groups of people, rather than identities with which people have chosen to identify.
- = The perception that BAME refers only to non-White people, which does not consider White minority ethnic groups.

Where possible, this report presents data disaggregated by more detailed ethnic groups in addition to data consolidating BAME staff as a group.

Sex

Data on staff sex are returned to HESA with the possible options of: 'Female', 'Male' and 'Other'. For the purposes of this report, data from this field will be referred to as sex. However, in reports prior to 2022, this section was labelled as gender. As of the 2022 report, we added a new series of data tables that includes all three response options returned to HESA. In previous years, due to small numbers, staff who have indicated their sex as 'Other' have been excluded.

Up to and including the 2019/20 staff records, 'Other' was defined as applying to those whose sex aligns with terms such as intersex, androgynous, intergender, ambigender, gender fluid, polygender and gender queer. In 2020/21, the guidance was mixed, and the population self-identifying as 'Other' in the 2020/21 staff record consisted of individuals who may identify with a number of identities or be from a country where a third sex is legally recognised.

Following an open consultation process in 2021, HESA published a notification of changes to personal characteristics data collection, including changes made to the way staff sex data were collected. The changes to the SEXID field as part of the consultation were made to address the conflation between sex and gender that existed previously in the record. These changes were in full effect for the 2022/23 staff record.

HESA have published relevant guidance in November 2021 and May 2022. The question was updated to 'What is your sex?' with the following guidance issued to help individuals understand on what basis this question should be answered:

'Respondents considering how to answer should use the sex recorded on one of their legal documents such as birth certificate, Gender Recognition Certificate, or passport.'

This change and accompanying guidance clarify that HESA will now record legal sex, with the 'Other' category used only by individuals with a third sex that is legally recognised by another country. This will recognise the scenarios where, for example, an international staff member has a legal sex other than male or female. Nonetheless, HESA highlights that they will neither restrict the use of this code to specific nationalities nor expect providers to verify the sex of every staff member. However, HESA requests that providers make reasonable efforts to ensure that the data returned are at least accurate when aggregated at the provider level.

Prior to 2012/13

The HESA staff record included a legal sex field, with the possible options of male, female or indeterminate. HESA used the category 'indeterminate' – which is consistent with the managing information across partnerships (MIAP) common data definitions coding frame – to refer to intersex people. Intersex people are individuals born with anatomy and physiology that differs from contemporary ideals of what constitutes 'normal' male and female. It is recognised that some intersex people may find the indeterminate category used by HESA for the previous field offensive. For data return purposes, institutions were able to ask staff about their gender using the intersex terminology and return any positive responses to HESA using the MIAP coding and terminology in 2011/12.

Staff who identified as intersex were excluded in any analysis of 2002/03 to 2011/12 data. This is because any statistics drawn from these small numbers would not give accurate information about the proportion of intersex people in the sector.

Religion and belief

Religion or belief refers to the full diversity of religious and belief affiliations within the UK, including non-religious and philosophical beliefs such as atheism, agnosticism and humanism.

Beginning with the 2012/13 staff record, institutions have the option of returning staff religion and belief data to HESA. This information is recorded on the basis of the staff member's own self-assessment.

In 2022/23, it became mandatory for all English and Welsh HEIs to return data on staff religion and belief. The filed options available for 2022/23 were: no religion; Buddhist; Christian (with further denominational options provided in Scotland and Northern Ireland); Hindu; Jewish; Muslim; Sikh; Pagan; any other religion and belief; prefer not to say; and information not available.

For the purposes of this report, all Christian denominational options have been aggregated into a single Christian category.

Prior to 2022/23

Between 2012/13 and 2021/22, the possible field options for the religion and belief staff returns were: no religion; Buddhist; Christian (with further denominational options provided in Scotland and Northern Ireland); Hindu; Jewish; Muslim; Spiritual; Sikh; Any other religion or belief; Information refused; information not available.

Sexual orientation

Sexual orientation is a person's romantic or sexual attraction towards people of the same sex, people of a different sex, or to both sexes. This relates to a person's feelings rather than their actions.

Beginning with the 2012/13 staff record, institutions have the option of returning sexual orientation data to HESA. In 2022/23, it became mandatory for all English and Welsh HEIs to return data on staff sexual orientation. The HESA sexual orientation field is recorded based on the individual's own self-assessment. In 2022/23, the options for the HESA sexual orientation field were: bisexual, gay or lesbian;; heterosexual or straight; other sexual orientation; prefer not to say, and information not available.

Prior to 2022/23

Between 2012/13 and 2021/22, the available options for the HESA staff sexual orientation field were: bisexual, gay man, gay woman/lesbian, heterosexual, other, information refused, and information not available.

Advance HE acknowledges that the previous gendering of the response options gay man and gay woman/lesbian might mean that respondents who do not exclusively identify with the terms man or woman are unable to answer this question as they wish. Advance HE has more recently recommended the inclusion of the identities 'queer' and 'asexual' when collecting sexual orientation data.

For further information on monitoring sexual orientation, see www.advance-he.ac.uk/knowledge-hub/guidance-collection-diversity-monitoring-data.

Trans

Prior to the 2020 report, the terms gender identity and gender reassignment were used to label this section. These terms have different meanings: gender identity refers to a person's internal perception of their gender, whereas gender reassignment is the legal term used in the Equality Act to describe the protected characteristic of anyone who 'proposes to undergo, is undergoing or has undergone a process (or part of a process) for the purpose of reassigning the person's sex by changing physiological or other attributes of sex'.

Beginning with the 2012/13 staff record, institutions have the option of returning information to HESA on whether a person's gender identity is the same as the sex assigned to them at birth. The proposed question for this field is 'Does your gender identity match your sex as registered at birth?', with the possible answer options being: yes, no, information refused (i.e. prefer not to say), and information not available. Information is recorded for the gender reassignment field on the basis of the staff

member's own self-assessment. In 2022/23, it became mandatory for all English and Welsh HEIs to return data on staff gender identity, while Scotland removed this field from its coverage, replacing it with a new optional field, called TRANS, which records the transgender status of a staff member using a question that aligns with the relevant Scottish census one, namely 'Do you consider yourself to be trans, or have a trans history?', with the possible answer options being 'Yes', 'No', 'Prefer not to say' and 'Information not available'.

The phrasing and options associated with this question refer to whether an individual's gender is different from their sex assigned at birth, rather than their current gender identity, and this data is used to investigate differences between staff who might identify as trans and/or non-binary and staff who do not. Individuals who have reported that their gender is different from their sex assigned at birth may use a wide variety of terms to describe themselves. Trans is used as an inclusive umbrella term to describe this data.

For further information, see our trans guidance www.advance-he.ac.uk/knowledge-hub/trans-staff-and-students-he-and-colleges-improving-experiences.

Activity**Academic staff**

Academic staff are defined as staff with at least one academic contract of employment and whose contract activity can be categorised as 'Managers, directors and senior officials', 'Professional occupations' or 'Associate professional and technical occupations' (defined by the 2010 Standard Occupational Classification (SOC) major groups 1, 2 or 3). This may therefore include vice chancellors and other senior academic managers, medical practitioners, dentists, veterinarians and other health care professionals whose contract of employment includes an academic function.

The academic employment function may be teaching, research, teaching and research or neither teaching nor research (where an academic professional has taken up a senior administrative responsibility but there is no change to the academic function in their contract of employment).

Prior to 2012/13

Academic staff were defined as those staff responsible for planning, directing and undertaking academic research and teaching within HEIs. This category may also include vice-chancellors, principals, and clinical and healthcare professionals who undertake teaching or research activities.

Professional and support staff

HESA refers to these staff as 'non-academic staff', and defines them as staff who do not have an academic employment function. However, for the purposes of this report, these staff will continue to be referred to as 'professional and support staff'. This group includes managers, non-academic professionals, student welfare workers, secretaries, caretakers and cleaners.

2019/20 onwards

HESA changed the way data were collected for professional and support staff in 2019/20, making returns on this population of staff voluntary for HE providers in England and Northern Ireland (i.e., it was no longer mandatory for English and Northern Irish institutions to submit data on professional and support staff). This meant that the overall population of professional and support staff fell from 222,885 in 2018/19 to 198,820 in 2022/23.

In both our 2021 and 2022 statistical reports, we presented logistic regression analyses to show that this change led to certain populations of staff (i.e., professional and support staff from Asian and Black ethnic backgrounds, identifying as female, disclosing as disabled, or aged 41 to 60 years old) being less likely to have their data reported to HESA than other groups (i.e., professional and support staff who are White, male, non-disabled, or aged 40 and under/ 61 and over). The consistency

of these results across two academic years shows that by allowing HE providers to choose whether they submit data on their professional and support staff, we lose the ability to interpret changes in this sample in a reliable way. Furthermore, this analysis applies particularly to the professional and support staff in England and Northern Ireland, meaning that year-on-year comparisons for data presented in the current report for Scotland and Wales are still possible.

Country of institution

The allocation of an institution to a geographical region relates only to the administrative centre of that institution. There may be staff employed at institutions who are working in regions other than that of the administrative centre of the institution.

Although the Open University operates throughout the UK, its administrative centre is located in England, and is counted as a wholly English institution.

Nationality

Nationality defines the country of legal nationality. Data is supplied to HESA in the form of country codes.

UK nationals staff are those whose country of legal nationality is the UK, including the Channel Islands and Isle of Man.

Non-UK nationals staff are those whose country of legal nationality is a country other than the UK.

Mode

Full-time staff are those whose contracts state that their mode of employment is full-time. This includes staff who work full-time for part of the year and term-time only staff who work full-time during the term. Part-time staff are those whose contracts state that their mode of employment is part-time.

Please note that the mode of employment is an attribute of the contract, not the person. Therefore, a person will be counted as wholly part-time even if they hold a number of part-time contracts that add up to one full-time equivalent (FTE). The FPE allocated to the full-time category will only reflect the people that hold a full-time contract. This is consistent with the treatment of other attributes of the contract.

Contract type

Contract type refers to the type of contract(s) a member of staff has with the HEI at the date the data is returned to HESA, or date of leaving if earlier.

Permanent or open-ended contract staff

Those who were employed on a contract of employment that states the member of staff as permanent or on an open-ended contract. This includes term-time-only staff who were employed on an open-ended contract.

Fixed-term contract staff

Fixed-term contract staff are those employed for a fixed period or who have an end date on their contract of employment. This includes staff on rolling fixed-term contracts.

Contract level

Contract level records the Universities and Colleges Employers Association (UCEA) or XpertHR defined level of the contract. Contract levels are used to define professors and senior managers (see professorial and senior management categories below). Please note that where data is split by contract levels, 'unknown' is included in the total but not in separate breakdowns.

1: Head of institution, vice-chancellor (VC)/ principal

The most senior manager within the institution (ie chief executive officer).

2: deputy/pro vice-chancellor (D/PVC), chief operating officer, registrar, university secretary

These roles are the highest level appointments reporting directly to the VC and will have primary responsibility for the organisation's performance and strategic development. They are responsible for a major part of the academic life of the university, and are differentiated from level 3 by having responsibility across the institution, or have an overseeing role over, all/most of the internal professional/administrative services of the institution. They may have Dean responsibilities for a specific faculty in addition to their D/PVC responsibilities, for more than one functional area at a strategic rather than an operational level. Staff appointed at this contract level are likely to deputise for the VC and likely to apply to a handful of positions in the institution.

3a: head/director of major academic area

These roles will be heads of major academic areas where a number of schools/departments/divisions are combined into a small number of larger groupings. These roles have significant management and resource responsibility and will be part of the university's senior management team (although level 2 roles may meet separately as the ultimate executive decision-makers). It is possible that only a very small number of staff in each institution are appointed at this contract level and these are likely to be deans, directors of faculties, or heads of academic divisions.

3b: director of major function/group of functions eg finance, corporate services, human resources (HR)

These roles have overall responsibility for matters across a major function or group of functions or defined activity. Staff at this contract level will be part of the university's senior management team (although level 2 roles may meet separately as the ultimate executive decision-makers).

**3/4a1: head of school/division/department/
centre size 1**

This category includes heads of distinct areas of academic responsibility (i.e. a school or department), who manage a large unit of more than 100 staff including academic and support staff, but excluding atypical staff. Staff at this contract level are unlikely to be on the senior management team, unless it is the first level of function head below the role of level 2.

**3/4a2: head of school/division/department/
centre size 2**

This category includes heads of distinct areas of academic responsibility (i.e. a school or department), who manage a medium-sized unit of between 51 and 100 staff including academic and support staff, but excluding atypical staff. Staff at this contract level are unlikely to be on the senior management team unless it is the first level of function head below the role of level 2.

**3/4a3: head of school/division/department/
centre size 3**

This category includes heads of distinct areas of academic responsibility (i.e. a school or department), who manage a small unit of between 1 and 50 staff including academic and support staff, but excluding atypical staff. Staff at this contract level are unlikely to be on the senior management team unless it is the first level of function head below the role of level 2.

**4a: head of a sub-set of an academic area/
director of small centres**

Staff in this category will have responsibility for a subset of a division/department/school (e.g. subject discipline group) or research group, or cross school/department responsibility (e.g. director of research). Such staff might be professors who head departments/research centres.

4b: senior function head

Staff in this category will have full responsibility for a complete function or activity below senior management team level but will be part of the management team for the overall function.

5a: professor

This category includes senior academic appointments, which may carry the title of professor, but which do not have departmental line management responsibilities.

5b: function head

Staff in this category have full managerial responsibility for one or more activities and input into policy formation for those activities. These staff are also responsible for staff within their area of activity.

**Level I – non-academic staff section manager,
senior lecturer (pre-92), principal lecturer
(post-92), reader, principal research fellow**

Staff in this category are responsible for the day-to-day management of a significant professional service unit, activity, department or project, with specifically identified responsibilities. Types of roles falling into this category include academic subject specialists, academic programme coordinators and/or academic staff with high level expertise/knowledge.

**Level J – section/team leader (professional,
technical, administrative), lecturer B (pre-92),
senior lecturer (post-92), senior research fellow**

Staff in this category are responsible for the day-to-day management of a team of staff. Specialists with experience or seniority but limited management responsibility may be found at this level. In the case of academic staff, although there may be no responsibility for staff or budgets, there will be substantial responsibility for students.

**Level K – senior professional/technical staff,
lecturer A (pre-92), lecturer (post-92), research
fellow, researcher/ senior research assistant,
teaching fellow**

Staff in this category operate at an experienced, professional level in a single area of work without supervision. These staff are likely to be responsible for less experienced staff at level L and below and may coordinate the activities of a team. In the case of academic staff, although there may be no responsibility for staff or budgets, there will be significant responsibility for students.

Level L – professional/technical/senior administrative staff, research assistant, teaching assistant

Staff in this category operate as a fully competent professionals within a single area of work with minimal supervision. This is a standard ‘Officer’ level. For academic jobs, this is an assistant or instructor role. In some professional areas this would be the expected entry level.

Level M – assistant professional staff, administrative staff

This category typically includes entry level professionals, working under instructions from others within a defined area of work. These staff may be part-qualified in an appropriate professional discipline. Although they may supervise/assist/guide less experienced administrative staff, they would not cover academic roles.

Level N – junior administrative staff, clerical staff, technician/craftsman operative

Staff at this level will normally work under closer supervision than level M staff but will be experienced in specific areas of a job role. These staff are mainly responsible for performing a range of simple, routine tasks within basic procedures and under regular supervision. Staff at this level may be school leavers, trainees or modern apprentices and they would not cover academic roles.

Level O – routine task provider

Staff at this level will carry out a range of simple tasks within a defined routine and where guidance is readily available/under regular supervision. Some planning and organising of own workload (largely around the timing and sequencing of assigned tasks to make sure deadlines are met) will typically be required by these staff.

Level P – simple task provider

Staff at this level will carry out simple and/or repetitive tasks under close supervision, typically supporting students and staff often as part of a team engaged in the same tasks. These tasks and

routines are generally simple and repetitive and are closely supervised.

For further information about contract levels, see www.hesa.ac.uk/collection/c15025/combined_levels.

Occupational group

The UK Standard Occupational Classification (SOC) provides a national standard for categorising occupational information – it forms the basis of occupational classification in a variety of national surveys that collect statistical information such as the *Labour force survey and the New earnings survey*. Therefore, the utilisation of SOC for classifying occupations within the HE sector both allows for the heterogeneity of occupations that exist to be reflected and enables comparisons with other sectors of the economy and from a variety of data sources.

HESA has used the SOC2010 variant of the SOC coding framework. This version maintains the same nine major groups used in previous versions of SOC, but it is no longer possible to replicate the variant previously used by HESA for staff in the HE sector, which permitted staff to be grouped into thirteen broad occupational activities. In addition, the association of academic and non-academic activities solely with SOC major groups is no longer possible, due to the incorporation of both types of activities at the sub-major level. Consequently, staff may be pursuing an academic or non-academic activity within a given SOC major group, whereas previously certain SOC groups were held to be entirely academic or non-academic in their own right.

The publication of staff activities by SOC major group may therefore now occur with or without reference to the academic nature of that activity, whereas previously this was implicit in the titles of the activities published. For this reason, care should be taken when comparing data across years.

Please note that staff with academic contracts can have a SOC major group other than 1–3. In this report, these contracts are included in the academic total and shown separately as ‘clerical and manual occupations’ in the tables where SOC activity groups are shown alongside academic contract marker.

Academic contract

Teaching-only staff

Teaching-only staff are those whose contract of employment states that they are employed only to undertake teaching.

Research-only staff

Research-only staff are those whose contract of employment states that their primary academic employment function is research only, even though the contract may include a limited number of teaching hours (up to 6 hours per week or pro-rata for part-time staff).

Teaching and research staff

Teaching and research staff are those whose contract of employment states that they are employed to undertake both teaching and research, including 6 or more hours of teaching per week (averaged over the number of actual teaching weeks) as a minimum (pro-rata for part-time staff) and the remaining contract hours as research-only.

Neither teaching nor research staff

Staff whose contracted academic employment function is neither teaching nor research, eg vice-chancellor.

Academic subject area

The coding framework for cost centre was revised for the 2012/13 staff record and therefore academic subject area data from 2012/13 onwards are not comparable with previous years.

SET/non-SET

SET stands for science, engineering and technology.

SET subject areas

This report uses generic classification of academic disciplines based on **HESA’s cost centres**.

SET subject areas in this report are:

- = agriculture, forestry and food science
- = anatomy and physiology
- = archaeology
- = architecture, built environment and planning
- = biosciences
- = chemical engineering
- = chemistry
- = civil engineering
- = clinical dentistry
- = clinical medicine
- = earth, marine and environmental sciences
- = electrical, electronic and computer engineering
- = general engineering
- = geography and environmental studies
- = IT, systems sciences and computer software engineering
- = mathematics
- = mechanical, aero and production engineering
- = mineral, metallurgy and materials engineering
- = nursing and allied health professions
- = pharmacy and pharmacology
- = physics
- = psychology and behavioural sciences
- = veterinary science

Non-SET subject areas

Non-SET subject areas in this report are:

- = anthropology and development studies
- = area studies
- = art and design
- = business and management studies
- = catering and hospitality management
- = classics
- = continuing education
- = economics and econometrics
- = education
- = English language and literature
- = health and community studies
- = history
- = law
- = media studies
- = modern languages
- = music, dance, drama and performing arts
- = philosophy
- = politics and international studies
- = social work and social policy
- = sociology
- = sports science and leisure studies
- = theology and religious studies
- = total academic services
- = central administration and services
- = premises
- = residences and catering
- = staff and student facilities

Professorial category

HESA uses data from the contract level field to derive information about staff members' professorial category. Staff holding a contract which aligns with the Universities and Colleges Employers Association (UCEA) contract level 5A (Professor) are considered to hold professorial status. This level indicates a senior academic appointment which may carry the title of professor but which does not have departmental line management responsibilities.

From 2012/13 onwards, the way that professors are identified in the staff record changed and is not comparable with previous professorial data. The latest methodology identifies a staff member's level of contract and one of these levels is specified as professor. However, it is likely that this is an undercount of all professors because many will fall into more senior levels i.e. Heads of department. Please take this into account when analysing professorial and contract level data.

Prior to 2012/13, 'professor' was a term associated with those returned in the HESA staff record as holding a contract for a professorial role, and as such the data are not directly comparable across years.

Senior management category

HESA uses data from the contract level field to derive information about whether a staff member is a senior manager. Senior management indicates a member of staff holding a contract at levels a0, b1, b2, c1 or c2.

Salaries

Salary data are based on the contract salary for members of staff at each institution at 31 July in the reporting period, or the end date of their contract, if earlier. Members of staff for whom the concept of a per annum contractual salary does not apply (eg staff paid hourly, staff with zero-hour contracts etc) have been excluded from the salary analysis.

For part-time staff, all data relating to salary has been scaled to full-time equivalent to take into account pay differences between part-time and full-time staff.

Clinical academics have been included in all salary analysis.

This report presents salary information in two ways:

Salary range

- = under £30,000
- = £30,000 to £50,000
- = over £50,000

Academic pay spine range

- = contract salary less than £21,197
- = contract salary between £21,197 and £27,130
- = contract salary between £27,131 and £36,385
- = contract salary between £36,386 and £48,840
- = contract salary between £48,841 and £65,577
- = contract salary more than £65,578

Contract salaries reported to HESA based on the framework salary spine or framework clinical spine, plus salaries not set against a nationally negotiated pay spine range are included in this analysis. Where HESA is provided with both a salary point (within the framework pay spine range or framework clinical spine) and an enhanced salary figure (eg London weighting), the actual enhanced salary is used.

Median salary and median pay gap

If all salaries were ordered in a list, the median salary would be the middle salary.

The median pay gap for disability, ethnicity and sex, has been calculated as:

$$(\text{non-disabled median salary} - \text{disabled median salary}) \div \text{non-disabled median salary}$$

$$(\text{White median salary} - \text{BAME median salary}) \div \text{White median salary}$$

$$(\text{male median salary} - \text{female median salary}) \div \text{male median salary}$$

Salary is based on the contract salary for members of staff at each institution at 31 July in the reporting period, or the end date of the contract if earlier.

Mean salary and mean pay gap

The mean is equal to the sum of the values divided by the number of values. Mean salary is calculated by multiplying the contract salary by FPE and dividing by the sum of the FPE:

$$\text{sum (FPE} \times \text{salary)} \div \text{sum (FPE)}$$

The mean pay gap for disability, ethnicity and sex has been calculated as:

$$(\text{non-disabled mean salary} - \text{disabled mean salary}) \div \text{non-disabled mean salary}$$

$$(\text{White mean salary} - \text{BAME mean salary}) \div \text{White mean salary}$$

$$(\text{male mean salary} - \text{female mean salary}) \div \text{male mean salary}$$

Salary is based on the contract salary for members of staff at each institution at 31 July in the reporting period, or the end date of the contract if earlier.

Academic starters

Starters are academic members of staff who commenced their contract of employment on or after 1 December in the previous reporting period and before or on 1 December in the current reporting period.

Academic leavers

Leavers are academic members of staff for whom all contracts ended on or after 1 December in the previous reporting period (i.e. 2021/22) and before or on 1 December in the current reporting period (i.e. 2022/23).

A staff member who retired prematurely and received a pension is regarded as a leaver and recorded as retiring, unless they are immediately re-employed in an institution's service. A member of staff whose contract ended, but who immediately started another contract, and therefore did not leave the HEI, is not included as a staff leaver. Staff on multiple contracts, where one of these contracts came to an end, are also not included as a staff leaver, if they were still employed in institutional service under one or more other contracts. All data on staff leavers exclude atypical staff.

HESA collects data on the destination of leavers to enable sector intelligence on cross-fertilisation between HE and other areas of employment and the migration of HE staff to and from the UK.

Destinations are presented as:

UK destination

- = other HEI in the UK
- = other education institution in the UK
- = research institute in the UK
- = student in the UK
- = NHS/General medical or dental practice in the UK
- = public sector in the UK
- = private sector in the UK
- = self-employed in the UK
- = voluntary sector in the UK

Non-UK destination

- = other HEI in an overseas country
- = other education institution in an overseas country
- = research institute overseas
- = student in an overseas country
- = health service in an overseas country
- = private sector in an overseas country
- = self-employed in an overseas country
- = voluntary sector in an overseas country

No longer in employment

- = no longer in regular employment
- = retired
- = deceased
- = not known/not applicable

Overview

Overview

After three years of fluctuating, the number of staff employed in UK higher education has reached similar levels to those reported in 2018/19, the last year that returning data on professional and support staff was mandatory for English and Northern Irish HEIs. However, this is driven by the continuous rise in the number of academic staff, 59.9% since 2003/04, rather than changes in the amount of data being returned on professional and support staff or an increase in their population.

There were large differences in salaries earned by activity, with just under half of professional and support staff earning £30,000 or less (43.4%), compared with roughly one in 20 academics (4.6%). Moreover, while relatively similar proportions of academic staff and professional and support staff worked full-time (64.9% of academic staff and 72.6% of professional and support staff, respectively), a considerably larger proportion of academic staff were on fixed-term contracts (29.7% of academic staff compared to 14.1% of professional and support services staff).

Around four out of 10 academic staff were on teaching and research contracts (42.9%), while one in 10 academics were professors (12.4%), the majority of whom worked in SET subject areas (61.3%). However, a larger proportion of academics that held senior management positions were from non-SET subjects (69.1%).

Leaving rates among academics were higher among non-UK staff than UK staff, and the most common leaving destination both within and outside the UK was another HEI.

Detailed commentary

0.1 Staff by country of institution: 81.1% of staff employed by HEIs worked in England. 12.6% worked in Scotland, 5.0% in Wales and 1.4% in Northern Ireland.

0.2 Trends: Between 2003/04 and 2022/23, the overall number of staff employed by UK HEIs increased by 29.8% from 338,105 to 439,010. This growth has largely been among academic staff, whose number increased by 59.9% from 2003/04 levels.

Although the long-term picture is that of growth, with staff numbers returning to levels recorded prior to professional and support staff data becoming voluntary to return in 2019/20, this is driven by increases in the academic staff population rather than improved returns for professional and support staff in 2022/23 or increases in this population. Prior to the change in reporting in 2019/20, professional and support staff made up roughly half of the staff population on record.

0.3-0.5 Contract mode and type: The majority of academic and professional and support staff worked full-time (64.9% and 72.6%, respectively). The majority of staff were also on open-ended/permanent contracts (77.3%). However, this proportion was significantly larger among professional and support staff (85.9%) than academic staff (70.3%). Among both academic staff and professional and support staff, a higher proportion of part-time staff were on fixed-term contracts (43.5% and 19.1%, respectively), than full-time staff (22.3% and 12.2%, respectively).

0.6 Staff nationality: The majority of staff were UK nationals (76.1%). However, this proportion was significantly greater among professional and support staff (86.7%) than academic staff (67.3%). Roughly half of non-UK staff were EU nationals (12.2% of all staff compared to 11.7% who were non-EU nationals).

0.7 Contract level: 12.9% of academic staff were in senior contract levels (HOI-5B), compared with 2.9% of professional and support staff. Academic staff were most commonly employed in XpertHR contract levels K (senior professional/technical staff, lecturer A, research fellow/researcher, senior research assistant or teaching fellow positions; 33.1%) and J (section/team leader, lecturer B, senior lecturer or senior research fellow positions; 24.8%). In contrast, professional and support staff were most commonly in contract levels M (assistant professional and administrative roles; 19.8%) and L (professional, technical and senior administrative staff, research/teaching assistant positions; 20.4%).

0.8 Occupational group: The vast majority of academic staff (99.0%) were in professional occupations (SOC2), while professional and support staff were most commonly in administrative and secretarial occupations (SOC4; 31.5%). Mode of employment varied considerably by occupational group. For example, among academic staff, the proportion who worked part-time varied from 17.6% of managers, directors and senior officials to 35.2% of those in on professional occupations. Among professional and support staff, 10.5% of managers, directors and senior officials worked part-time, compared with 61.5% of those in elementary occupations.

0.9 Research/teaching contract: Roughly four out of 10 of academic staff (42.9%) were on teaching and research contracts, with those on teaching-only contracts forming the second largest group (35.6%). Those on research-only contracts followed (20.8%), with those on contracts which involved neither teaching nor research forming the smallest group (0.7%).

0.10 SET: SET academic staff were concentrated in certain subject areas. For example, 19.9% of those working in SET were in clinical medicine, 11.2% were in biosciences, and 10.6% were in nursing and allied health professions. In comparison, relatively small proportions of academic staff worked in archaeology (0.6%) or mineral, metallurgy & materials engineering (0.8%).

0.11 Non-SET: Non-SET academic staff also tended to be concentrated in certain subject areas. A large proportion worked in business and management studies (18.9%), art and design (10.1%) and education (9.5%). On the contrary, less than one percent each worked in area studies (0.4%), staff and student facilities (0.4%), catering and hospitality management (0.5%) and classics (0.6%).

0.12 Professors: Overall, 10.2% of academic staff held professorial roles, of whom 61.3% worked in SET subjects. The proportion of academics who were professors was higher among SET academics (11.3%) than non-SET academics (8.8%). This difference was most pronounced among part-time academic staff members (where 8.0% of SET and 4.4% of non-SET academics held professorial roles, compared with 12.7% of SET and 11.9% of non-SET full-time academics).

0.13 Senior managers: 0.6% of academic staff were in senior management roles, the majority of whom (69.1%) worked in non-SET subjects. A greater proportion of senior managers worked full-time than other academic staff (93.1% compared with 64.7%).

0.14 Salary range: Just under half of academic staff earned over £50,000 (44.3%), compared with 14.0% of professional and support staff. In contrast, just under half of professional and support staff (43.4%) earned less than £30,000 compared with 4.6% of academic staff.

The pattern was similar among full-time staff, with more than half of academic staff (52.9%) earning more than £50,000 compared with only 16.6% of professional and support staff.

Among part-time workers, the majority of academic staff earned between £30,000 and £50,000 (61.5%) whereas the majority of professional and support staff earned less than £30,000 (60.9%).

0.15 Pay spine range: 51.5% of academic staff earned less than £48,841. 18.3% were on the highest pay spine, earning £65,579 or more, and just 0.2% were on the lowest pay spine, earning less than £21,197.

0.16 Leaving status: Overall, 17.8% of academic staff left their institution between 2021/22 and 2022/23. This rate was higher among non-UK nationals (21.3%) than UK nationals (16.1%).

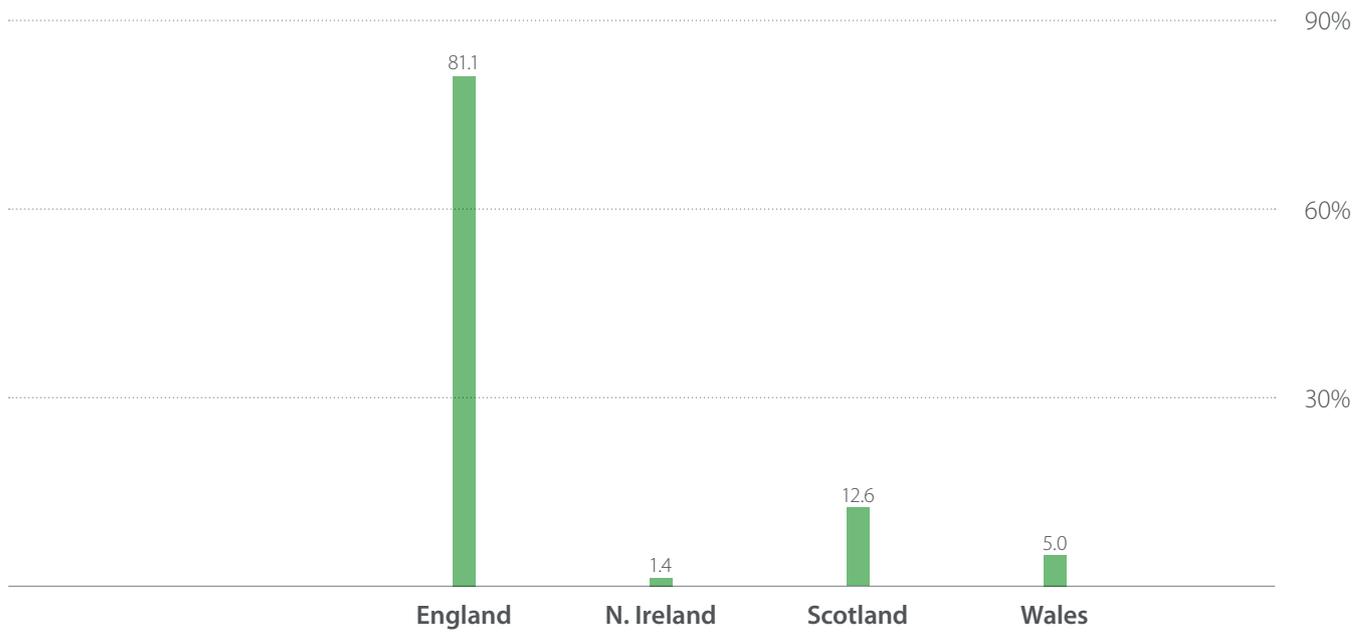

0.17 Leaving destinations: Of academic leavers with a known leaving destination, over half entered UK-based employment (66.6% of UK nationals and 62.7% of non-UK nationals), with the most common destination being another HEI in the UK (32.3% of UK nationals and 31.1% of non-UK nationals). Roughly one in five non-UK leavers moved overseas for employment (21.3%, which is a decrease from 27.5% in the previous year), again with the most common destination being another HEI (10.1%). In comparison, just 2.9% of UK leavers moved to employment outside of the UK. 13.3% of UK leavers retired, compared with 2.4% of non-UK leavers. The proportion of UK nationals who were no longer in regular employment decreased from 35.3% in 2021/22 to 30.4%. A smaller but similar decrease was seen among non-UK leavers from 19.2% in 2021/22 to 16.0% in 2022/23.

Proportions of academic staff who left their institution between 2021/22 and 2022/23

Proportions of academic staff who left their institution between 2021/22 and 2022/23 by destination

Age

Overview

Age is one of the nine protected characteristics under the Equality Act 2010. Although it is one of the most frequently collected protected characteristics when it comes to equality monitoring (**Office for National Statistics 2018**), age tends to be one of the less commonly explored aspects of equality, diversity and inclusion (EDI) for both staff and students in UK HE. This might be because age statistics tend to follow expected patterns, like more representation of older staff in senior roles and of younger staff on fixed-term contracts. This lack of focus on age and relevant data may lead to a lack of support for staff in age groups underrepresented at certain grades or within contract types (e.g. older staff on teaching-only or research-only contracts, or younger staff in SOC1 groups). With a section dedicated to age-related data in our annual equality in HE statistical publications, we seek to help the sector gain useful insights in developing HE that is inclusive of all age groups.

Overall, there is little variation to the age composition of staff in UK HE. Across the UK, the majority of staff employed by providers are between the ages of 31 and 55 (64.9% of the total in 2022/23) (Table 1.1), with professional and support staff continuing to have a younger age profile than academic staff (Table 1.2).

When looking at the age of academic staff, the data show the continuation of the historical trend of differing age profiles of academics across disciplines. Specifically, academic staff in SET subject areas are younger compared to their counterparts from non-SET subject areas (in 2022/23, 36.0% of

non-SET academic staff were over the age of 50 compared with 26.9% of SET academic staff) (Tables 1.8 and 1.9). However, this difference in the age profile of academic staff among SET and non-SET subjects disappears, when looking at the age of professors, with the age distribution of professors being almost identical in SET and non-SET subject areas (Table 1.11). SET subjects with younger staff profiles (i.e. higher proportions of staff aged 40 and under) include chemical engineering (60.0%), chemistry (59.8%), and physics (58.0%). Conversely, non-SET subjects with the lowest proportion of staff aged 40 and under include continuing education (24.3%) and education (25.3%) (see **Belluigi, Arday, and O’Keeffe 2023** for an in-depth exploration of the field of Education Studies).

In terms of contract type, despite an overall drop in the proportion of academics employed on fixed-term contracts from 32.3% in 2021/22 to 29.7% in 2022/23, this is still more than double the proportion of professional and support staff (14.1%). Moreover, the proportion of younger staff on fixed-term contracts decreased steadily with age from 79.2% of academic staff aged 25 and under to 22.8% of staff aged 55 and over (Table 1.3). This reflects the historic issue of precarious work within academia, particularly for those in younger age groups (**University and College Union 2021**).

In terms of employment mode, broadly speaking, after the age of 45, rates of full-time work decline with age (from 71.5% of all staff aged 46-50, to 29.8% of staff aged 66 and over) (Table 1.2). However, with the exception of staff aged 66 and over, the majority of staff in all age groups still work full-time. In terms of part-time work, there are stark differences in the proportions of staff from the youngest age groups employed in this mode. Specifically, in 2022/23, seven out of ten academics aged under 25 were employed part-time (70.5%),

compared with three out of ten professional and support staff in this age group (32.2%). It is worth highlighting that the proportion of academic staff aged 30 and under who were on part-time contracts has increased steadily since 2019/20 (from 66.1% to 70.5% of those aged 25 and under, and from 34.3% to 40.1% of those aged 26-30).

Sectoral reports highlight the changing nature in employment patterns of both academic and professional and support staff since 2000 (**Wolf and Jenkins 2020; 2021**), focusing on the proliferation of teaching-only contracts among academic staff and the increase in professional and support roles, particularly those that relate to student experience. Looking specifically at academic staff, these reports draw a picture of casualisation and precariousness, mostly affecting those on teaching-only or research-only contracts (University and College Union **2021; 2022; 2023**), which are more common among academics in the youngest age groups.

Finally, in terms of academic leavers, staff aged 30 and under are still the largest proportion leaving employment at their HEI, with 33.9% leaving between 2021/22 and 2022/23 (32.9% of UK nationals and 35.4% of non-UK nationals) (Table 1.14). The youngest and oldest academic staff members were leaving employment at their HEI in much higher rates compared with academic staff in the middle age groups. For the first time though, the majority of UK academic leavers aged 51-60 entered other UK employment instead of no longer being in employment (Table 1.15). A similar declining trend was also noted in the leaving patterns of those aged 61 and above. In other words, older staff are not leaving the UK HE workforce in the same way as before and are remaining in employment longer (albeit outside of HE). This might be a testament to the increasing economic pressures and pension

worries exacerbated by the recent cost of living crisis, which leads elder academics to remain at work (**University and College Union 2022; Grove 2018**).

Advance HE's statistical reports provide one of the few sources which can be used to track age statistics of staff in UK HE across time. This can be used to draw insightful perspectives on major debate issues, related for example, around the employment patterns of younger academics, as well as the changes in terms of leaving destinations for older academics. As dedicated guidance around managing staff age diversity in the UK HE is scarce (e.g. **Manfredi 2008**), we encourage the sector to place emphasis on age as an EDI characteristic worth investigating, especially as guidance and policy documents at the national (e.g. **Makoff 2021**) and international level (e.g. **Equinet 2018**) focus on the need to create age-friendly workplace cultures.

Highlight statistics

- = The proportion of academic staff under 30 years of age on part-time contracts has been increasing year on year since 2019/20 (from 66.1% to 70.5% of those aged under 25, and from 34.3% to 40.1% of those 26-30).
- = Within the last three years, there is an increasing trend in the proportion of academic staff up to 30 years of age employed on permanent contracts. However, the proportion of young academic staff on fixed-term contracts is still more than double that of their professional and support services counterparts.
- = There has been a year-on-year increase in the proportion of academics up to 30 years old employed on teaching-only contracts within the last 5 years.

- = For the first time, the majority of those UK academic leavers aged 51-60 entered another UK employment instead of no longer being in employment. A similar declining trend is also noted in the patterns of those aged above 61.
- = When looking at the overall figure across all age groups, there is a year-on-year declining trend in the proportion of UK academic leavers joining non-UK employment since 2020/21.

Detailed commentary

The age categories presented in this section are calculated from staff ages at 31 August of the reporting year.

Additional detail for select tables in this section, such as by five-year age bands, is available at www.advance-he.ac.uk/knowledge-hub/equality-higher-education-statistical-reports-2022-data-tables

1.1 Overall figures: Across the UK, the majority of staff employed by providers were between the ages of 31 and 55 (64.9%). Only 16.4% were aged 30 and under; however, the proportion of staff in this age group was higher in Scotland (20.5%) and England (16.1%), than in Wales (13.9%) and Northern Ireland (10.6%).

1.2 Employment activity: Professional and support staff had a younger age profile than academic staff, with 19.6% aged 30 and under compared with 13.8% of academic staff. Compared to 2021/22, the proportions of both academic and professional and support staff remained almost unchanged across all age groups.

In terms of employment mode, for academic staff, full-time work was most prevalent among those aged 31-35 (72.1%), whereas for professional and support staff among those aged 26-30 (83.3%).

1.3 Contract type: Across all age groups, the majority of professional and support staff were on open-ended/permanent contracts, ranging from 55.6% of those aged 25 and under to 93.8% of those aged 61-65. In contrast, academic staff aged 30 and under were most commonly employed on fixed-term contracts (79.2% of those aged 25 and under and 66.9% of those aged 26-30).

Overall, there is a declining trend in the proportion of academics on fixed-term contracts across all age groups compared to last year, bringing the proportion of academics employed on such contracts from 32.3% in 2021/22 to 29.7% in 2022/23. Specifically, the proportion of academics aged 25 and under on open-ended/permanent contracts has increased from 17.3% in 2021/22 to 20.8% in 2022/23, continuing a positive trend in this area since 2019/20. Specifically, the population of academic staff aged 25 and under on permanent contracts has gone from 1,100 in 2019/20 to 1,715 in 2022/23 (an increase of 55.9%). Similar patterns were observed among those aged 26-30, which may indicate that institutions are moving away from precarious modes of employment for young academics.

There has been a similar positive trend among professional and support staff, with the proportion of professional and support staff aged 25 and under on open-ended/permanent contracts increasing from 51.3% in 2021/22 to 55.6% in 2022/23.

1.4-1.6 Occupational groups: There were marked differences among occupational groups in relation to staff age, particularly when academic and professional and support staff were considered separately. For example, more than half (57.0%) of the academic staff employed as managers, directors and senior officials (SOC1) were aged 51 and over, compared with only 38.6% of professional and support staff working in this occupational group. Also, whereas those aged 41-50 constituted the largest proportion of professional and support staff employed as managers, directors and senior officials (SOC1)

(36.8%), it was those aged 51-60 that made the largest proportion of this occupational group for academic staff (43.0%).

Looking at the age distribution across the rest of the occupational groups in which professional and support staff were classified, roughly four out of 10 (41.1%) aged 30 and under worked in administrative and secretarial occupations (SOC4;) and less than a quarter (24.4%) in associate professional and technical occupations (SOC3).

1.7 Research/teaching contract: The majority of academic staff aged 35 and under were in either teaching-only or research-only contracts.

Over the last five years, there have been modest year-on-year increases in the proportion of academics aged 30 and under on teaching only contracts (from 63.0% in 2018/19 to 68.6% in 2022/23 for academics aged 25 and under, and from 33.7% in 2018/19 to 42.7% in 2022/23 for academics aged 26-30). This shift is likely related to the need to cover the expanding student numbers; online teaching and learning provisions associated with the pandemic (**Arday 2022**); and the need to buy out staff on teaching and research contracts to optimise Research Excellence Framework submissions (**Wolf and Jenkins 2021**).

The proportion of academic staff on research-only contracts showed little variation across all age groups, with most staff on this type of contract being between the ages of 26-35 (50.4%).

1.8 SET subject areas: The age profile of academic staff varied by SET subject. Subjects with the highest proportions of staff aged 40 and under were chemical engineering (60.0%), chemistry (59.8%), physics (58.0%) and mineral, metallurgy and materials engineering (57.8%). In contrast, proportions of staff in this age group were the lowest in nursing and allied health professions (31.3%), clinical dentistry (37.1%) and agriculture, forestry and food science (38.2%).

1.9 Non-SET subject areas: Academic staff in non-SET subject areas tended to have an older age profile than those in SET, with 36.0% of non-SET academic staff being over the age of 50 compared with 26.9% of SET academic staff. Again, for non-SET subjects the age profile of staff varied considerably by subject area. Subjects with the lowest proportions of staff aged 40 and under were continuing education (24.3%) and education (25.3%), whereas sports science and leisure studies (53.6%) and philosophy (51.2%) had the biggest proportion of staff in this age group.

1.10-1.11 Professorial status: In general, the majority of professors were aged 51 and over (68.5%). Part-time professors were typically older than full-time professors. Specifically, more than half of part-time professors were aged 61 years or above (51.8%), compared with 19.4% of those who worked full-time.

The age profile of professors was similar for academic staff in SET and non-SET subject areas, with 31.3% of SET professors aged 50 and under compared with 31.8% of non-SET professors in this age group.

1.12-1.13 Senior managers: Academic senior managers had a markedly older age profile than other academic staff, with 74.9% of academic senior managers being aged 51 and over compared with 30.7% of other academic staff in this age group. Academic senior managers who worked part-time tended to be older than those who worked full-time. Specifically, 82.2% of part-time academic senior managers were aged 51 and over, compared with 74.4% of full-time academic senior managers. Again, the age profile of academic senior managers who worked in SET compared with those who worked in non-SET subject areas was broadly similar.

1.14 Leavers: For another year, the largest proportion of academic staff leaving employment at their HEI between 2021/22 and 2022/23 was among staff aged 30 and under (33.9%) for both UK nationals (32.9%) and non-UK nationals (35.4%).

1.15 Leaving destinations of UK academics: Of UK academic leavers with a known leaving destination, approximately eight out of ten staff aged 50 and under entered UK employment (80.7%), with the most common destination being another HEI (37.2%), followed by joining the private sector (11.4%). In contrast, only 20.6% of those aged 61 and over entered UK employment, with the majority of these leavers being no longer in employment (78.7%). 60.5% of academic leavers who went into non-UK employment were aged 40 and under, with the majority of these leavers entering employment at an HEI overseas.

However, compared with UK employment, the rate of non-UK employment among UK academic staff leavers was very low overall, ranging from 0.6% of those aged 61 and over to 3.9% of those aged 30 and under and those aged 41-50. It is worth noting that this is an ongoing trend, with the proportion of UK academics aged 30 and under leaving for non-UK employment decreasing from 5.4% in 2020/21 to 3.9% in 2022/23. This is also the case for UK academic leavers aged 31-40, whose equivalent percentage dropped from 5.2% in 2020/21 to 3.5% in 2022/23. This trend is likely related to Brexit and the impact this has had on the employment potential of UK academics in EU institutions (see **Courtouis and Sautier 2022** for how these concerns were expressed by a group of UK academic researchers based in Switzerland).

1.16 Leaving destinations of non-UK academics: Among non-UK academic staff leavers with a known leaving destination, 65.0% of those aged 50 and under left their HEI for employment in the UK. This is an almost 10 percentage point increase compared to 2021/22, where 54.9% of those below 50 years of age left their HEI for another job in the UK. Leaving rates to non-UK employment were higher among non-UK academics aged 31 to 40 (23.9%) and 41 to 50 years (22.5%) than other age groups.

Disability

Overview

In this section, the term 'disabled staff' is used to refer to those who indicated that they are disabled on their HESA staff record. 'Non-disabled staff' is used to refer to those who indicated that they are not disabled, or whose disability status is unknown.

Consistent year-on-year increases in prevalence

The term 'disability' in HE is often automatically associated with students (Merchant et al. 2020; Williams et al. 2018), but the number of staff disclosing a disability has continued to rise year-on-year (from 3.9% in 2012/13 to 7.2% in 2022/23) (Table 2.3). It is likely that this trend reflects both a genuine increase in the representation of staff disclosing as disabled in the UK HE sector, as well as a number of other factors, including reduced stigmatising of disabilities, improved confidence to disclose, and increased awareness of different types of impairments. Nonetheless, there are many reasons why staff may not report a disability and it is likely that the prevalence reported here is an undercount, which should be taken into consideration when developing support services for disabled staff.

The prevalence of the individual impairment types reported by staff have been relatively stable between 2021/22 and 2022/23. As reported in previous **Equality in Higher Education Statistical Reports**, learning differences (from 1.4% to 1.7%), long-term illness or health conditions (from 1.5% to 1.6%) and mental health (from 1.1% to 1.2%) remain the most frequently disclosed impairments among staff (Table 2.2). However, these modest increases continue a positive trend which, if following those

reported for students (Gorczyński 2018) and corresponding research documenting decreases in staff wellbeing amongst disability professionals working in HE (Wilson et al. 2020), can be expected to continue.

Overrepresentation in lower-tier roles and associated barriers to progression

In June 2024, **UNISON announced** its intention to continue building on the legacy of their Year of Disabled Workers 2022, as disabled staff continue to disproportionately experience barriers to progression. While there has been an increase in the proportion of disabled staff who were professors from 6.5 in 2021/22 to 7.1% in 2022/23, this is still below that of non-disabled staff (10.4%) (Table 2.16) and disabled staff are still overrepresented in lower contract levels (eg 70.0% of disabled staff were on ExpertHR Contract Levels P through K compared with 63.4% of non-disabled staff) (Table 2.8). Barriers such as fewer opportunities for mentoring, fewer development programmes, cultural incongruence and a lack of role models (Brewster et al. 2017) result in disabled staff plateauing and not progressing to senior roles at the same rate as non-disabled staff. The impact of these barriers to progression is seen the median and mean pay gaps between disabled and non-disabled staff (8.5% and 9.6%, respectively) (Table 2.20) and exacerbated among staff with two or more intersecting minority identities. For example: 5.5% of disabled female academics were professors compared with 9.7% of disabled male academics¹.

1 Data extracted from HeidiPlus based on the HESA Staff record (excluding atypical) Full Person Equivalent, academic staff only and excluding staff who reported their sex as 'Other'.

Learning from existing initiatives and other resources

While positive work has been undertaken, such as the **Disability Inclusive Science Careers (DISC)** initiative and **RIDE HIGHER**, which aims to drive best practice for disability inclusion in the sector, initiatives supporting staff are often underdeveloped. Learnings from the legal case of **University of Bristol vs Abrahart**, such as the role of constructive knowledge of disability (before or in the absence of a definitive formal or medical diagnosis) and the importance of potentially adjusting policies and procedures depending on individual circumstances are relevant for disabled staff. While the sector lacks a clear understanding of the range and prevalence of different reasonable adjustments for disabled staff², and what is 'reasonable' when responding proportionately to escalating situations, other resources such as **Advance HE's annual mental wellbeing in HE conference** and the **Disabled Student Commitment**, provide HEIs with the opportunity to draw insights from student-focused interventions and develop whole-organisational approaches to disability.

2 In 2024, Advance HE delivered a research project for TASSO mapping reasonable adjustments and transition support for disabled students across the English HE sector. The project adopted a mixed methods approach, including a desk-based review of the current provision of 88 providers; a survey of 37 staff with responsibility for transition support or reasonable adjustments; interviews and focus groups with 16 members of staff; and focus groups with 26 disabled students. How, when and what type of reasonable adjustments are made for HE staff remains to be empirically examined at the sector level.

Detailed commentary

2.1 Overall figures: Overall, 7.2% of staff working in HEIs disclosed as disabled in 2022/23, continuing the upward trend noted within the last 10 years. Disability disclosure rates were higher among staff working in England (7.3%), and Wales (8.5%). There is a noticeable decrease in terms of disability disclosure rates across Northern Ireland (6.8%) compared to 2021/22 (7.5%).

2.2 Impairment type: There were differences between the most commonly disclosed impairment types between academic and professional and support staff. Among academic staff, a learning difference was the most commonly disclosed impairment type (26.1% of the total disabled academic staff), whereas a long-term illness or health condition was the most prevalent for professional and support staff (21.7% of the total disabled professional and support staff).

It is worth mentioning that the most significant difference noted compared to last year's figures was found in the increased proportion of disabled staff disclosing a mental health condition, which has risen from 12.8% to 14.9% for academic staff and from 17.9% to 19.4% for professional and support staff. Increases can also be seen in the number of staff reporting a learning difference, which has risen from 23.1% to 26.1% for academic staff and 19.1% to 21.6% for professional and support staff. A slight change in HESA's labelling of impairment categories may account for the change in the latter figures. This only strengthens the need to create fit for purpose procedures, processes and structures for disabled staff.

2.3 Trends: While the proportion of staff who disclosed as disabled has consistently been higher among professional and support staff than academic staff, disclosure rates for both groups have increased over time. 8.2% of professional and support staff and 6.3% of academic staff disclosed as disabled in 2022/23, which is 0.3 percentage

points higher for both groups compared to 2021/22, but almost double the figures noted ten years ago (4.5% and 3.4%, respectively).

2.6-2.7 Mode and contract type: There was a small difference in the disability disclosure rates among full-time academic staff on open-ended/permanent contracts (6.1%) and those on fixed-term contracts (5.2%), which was also present among full-time professional and support staff (8.1% on open-ended/permanent contracts compared to 8.7% on fixed-term contracts).

In contrast, differences in disclosure rates were greatest among part-time professional and support staff. Specifically, 9.4% of part-time professional and support staff on fixed-term contracts disclosed as disabled compared with 7.9% on open-ended/permanent contracts. For part-time academic staff this difference was much smaller, with 7.1% of academics on open-ended/permanent contracts disclosing as disabled, compared with 6.9% of those on fixed-term contracts.

2.8-2.9 Contract levels: Overall, the proportion of staff who disclosed as disabled was higher among those in lower contract levels, and this pattern was observed for both academic and professional and support staff.

2.10 Occupational groups: Among academic staff, the disability disclosure rate was highest in the associate professional and technical occupational group (SOC3; 8.8%), while for professional and support staff the rate was highest among those in administrative and secretarial occupations (SOC4; 9.4%) and Sales and customer service occupations (SOC7; 9.4%). In contrast, only 6.3% of academic staff in professional occupations (SOC2) and 5.9% of professional and support staff who were in skilled trades occupations (SOC5) disclosed as disabled. The number of professional and support staff in Managers, directors and senior official's roles who disclosed (SOC1) increased by 0.5 percentage points since 2021/2022.

2.12 Research/teaching contract: 7.4% of academic staff on teaching only contracts disclosed as disabled, compared to 5.2% of those on research only contracts. The disability disclosure rate among academic staff on teaching and research contracts was 5.9%.

2.13-2.14 SET subject areas: Among disabled academic staff, a slightly higher proportion worked in non-SET departments (50.6%) than SET departments (49.4%). Overall, 5.6% of academic staff working in SET subject areas disclosed as disabled. Disability disclosure rates varied considerably by subject area. The highest disclosure rates among academic staff were in nursing and allied health professions (9.2%) and psychology and behavioural sciences (8.7%). On the contrary, the lowest disclosure rates were found in mathematics (3.6%) and civil engineering (3.5%).

2.15 Non-SET subject areas: Among academics working in non-SET subject areas, 7.1% disclosed as disabled. Disability disclosure rates were the highest among academic staff working in arts and design (10.7%) and health and community studies (10.1%), and the lowest in economics and econometrics (3.0%) and catering and hospitality management (3.4%).

2.16 Professors: Overall, a lower proportion of professors disclosed as disabled (4.4%) than non-professorial academic staff (6.5%). Disability disclosure rates of professors were lower among those working in SET (3.7%) than non-SET (5.5%) subject areas. Among non-professors, part-time staff had a higher disability disclosure rate than full-time staff (7.2% compared with 6.1%). The proportion of professors who disclosed as disabled was similar between full- and part-time staff (4.4% and 4.6%, respectively).

2.17 Senior managers: Overall, a lower proportion of academic senior managers disclosed as disabled (5.3%) compared with other academics (6.3%). The disability disclosure rates of senior managers were lower among those working in SET (4.7%) compared to non-SET (5.6%) subject areas. Among other academics, those working in non-SET subject areas had a higher disability disclosure rate than those working in SET subject areas (7.1% compared with 5.6%).

2.18 Salary range: The proportion of academic staff members earning £50,000 or more was higher among non-disabled staff than disabled staff (44.7% compared with 38.8%, a difference of 5.9 percentage points), however this gap has decreased from 7.8 percentage points since 2021/22. Among full-time academic staff, the gap was 4.5 percentage points, with the equivalent for part-time staff being similar, at 5.4 percentage points.

Among professional and support staff, the proportion of non-disabled staff (14.3%) earning £50,000 or more was again higher than that of disabled staff (10.3%), though this gap was lower than that noted above for disabled and non-disabled academic staff.

2.19 Pay spine range: Similar proportions of disabled and non-disabled academic staff were on the lowest academic pay spine of less than £21,197 (0.1% and 0.2%, respectively). However, there were proportionally fewer disabled than non-disabled academic staff on the highest academic pay spine of £65,578 or more (13.2% compared with 18.7%, respectively).

2.20-2.21 Pay gaps: The overall median pay gap for 2022/23 is 8.5%, which is relatively like that reported for 2021/22 (8.7%). In contrast, the overall mean pay gap has increased slightly from 10.4% in 2021/22 to 9.6% in 2022/23.

Both median and mean pay gaps were slightly smaller for professional and support staff (5.7% and 6.4%, respectively) compared to academic staff (7.0% and 7.6%, respectively).

Disability pay gaps varied considerably by country and region, being greatest in Northern Ireland (8.5% median and 11.2% mean) and lowest in Wales (5.7% median and 8.3% mean).

For academic staff, the widest disability pay gaps were among managers, directors and senior officials (7.7% median and 9.1% mean). For professional and support staff, the widest median pay gap was among managers, directors and senior officials (7.9%), followed by skilled trades occupations (4.4%).

2.22 Academic pay gaps: Median and mean disability pay gaps were wider among non-professors than professors, at 5.3% and 4.2% among professors, and 8.4% and 7.4% among non-professors. However, these pay gaps varied greatly by country and region. For example, in Wales the median and mean disability pay gaps among professors were much lower compared to other countries, at 0.0% and 2.3%, respectively. In contrast, median and mean disability pay gaps between professors were considerably higher in London (5.4% and 5.7%, respectively).

2.23 Leavers: The proportions of academic staff who left their institution between 2021/22 and 2022/23 were similar across both disabled and non-disabled staff (17.1% and 16.1%, respectively).

2.24 Leaving destinations of UK academics: Among UK leavers with a known leaving destination, the proportion of disabled leavers who went on to UK employment (65.7%) was similar to that of non-disabled leavers (66.7%). A slightly lower proportion of disabled than non-disabled leavers entered non-UK employment (1.7% and 3.0%, respectively). There were also similar numbers of UK disabled leavers no longer in employment to non-disabled UK leavers (32.6% and 30.2%, respectively).

2.25 Leaving destinations of non-UK academics: Among non-UK leavers with a known leaving destination, 66.7% of those who disclosed as disabled entered UK employment, compared to 62.6% of non-disabled non-UK leavers. 9.3% of disabled non-UK leavers left for employment overseas, compared with 21.7% of non-UK non-disabled leavers. The remaining 24.0% were no longer in employment, which was 8.2 percentage points larger than that recorded for non-UK non-disabled leavers (15.8%).

Proportions of non-UK academic staff leavers who disclosed as disabled by known leaving destination

Ethnicity

Overview

Since 2021/22, there have been modest increases in the proportion of UK Black, Asian and minority ethnic staff from 12.2% to 12.9% and non-UK Black, Asian and minority ethnic staff from 36.1% to 39.7% (Table 3.1). Overall, these suggest the continuation of an ongoing positive trend towards improved representation of individuals from ethnically minoritised backgrounds in the UK HE workforce.

However, the data presented in this section examine the nuances of this workforce to paint a comprehensive picture of the representation and career progression of Black, Asian, and minority ethnic staff in UK HE. For example, improved representation of non-UK Black, Asian and minority ethnic staff was driven primarily by:

- = Increases in the proportions of non-UK Black and non-UK Chinese staff (from 5.3% to 6.2% and 8.6% to 9.4%, respectively) (Table 3.2).
- = A more pronounced increase among non-UK Black, Asian and minority ethnic academics (from 11.6% in 2021/22 to 13.0% in 2022/23, compared with 3.9% in 2021/22 to 4.7% in 2022/23 for professional support staff) (Table 3.3).

This approach to scrutinising the data highlighted two important and persistent disparities including the:

- = Overrepresentation of Black, Asian and minority ethnic staff in fixed-term contracts and lower-tier roles.
- = Ongoing underrepresentation of Black, Asian and minority ethnic staff in senior roles.

Overrepresentation in fixed-term and lower-tier roles

Overall, compared with White staff, disproportionately more UK and non-UK Black, Asian, and minority ethnic staff are on fixed-term contracts (Table 3.5) and in lower-tier roles (such as sales and customer service and elementary occupations amongst professional support staff) (Table 3.11). Although down from 48.1% in 2021/22, the fact remains that almost half of non-UK Black, Asian, and minority ethnic academics were on fixed-term contracts (46.6%) in 2022/23 (Table 3.5).

Moreover, almost three quarters of non-UK Black, Asian, and minority ethnic academic staff on part-time contracts were also on fixed-term contracts (72.4%), while this ranged from one third of part-time UK White academics (36.1%) to almost half of part-time non-UK White academics (49.3%) and UK Black, Asian and minority ethnic academics (45.6%) (Table 3.6). This represents virtually no change since 2021/22 (72.6%) while the others have all decreased (44.1%, 54.8%, and 51.3%, respectively). Taken together, this means that 1 in six Black, Asian and minority ethnic academic staff working in UK HE were on the most precarious combination of part-time/fixed-term contracts (compared with 1 in 8 White staff).

This highlights a significant issue related to job security and career stability as it echoes broader concerns that ethnically minoritised academic staff are disproportionately concentrated in roles that hamper their long-term career development (Arday 2018) and continue to experience marginalisation (Bhopal 2022; Rollock 2019).

Ongoing underrepresentation in senior roles

Discrepancies in the representation of ethnically minoritised staff in senior contract levels persist, despite a modest increase in the proportion of UK Black, Asian and minority ethnic staff in senior contract levels (defined as UCEA contract levels 3/4 A3 and above) from 7.3% in 2021/22 to 8.2% in 2022/23 (Table 3.8). Representation of non-UK Black, Asian and minority ethnic staff at the highest contract levels is difficult to interpret as these positions are more likely to be held by UK staff in general; for example, in 2022/23, 82.0% of Heads of Institution were UK White compared with 9.0% UK Black, Asian and minority ethnic staff, 7.5% non-UK White staff, and 1.5% non-UK Black, Asian and minority ethnic staff. It is important to highlight here that these percentages are at the aggregated level, combining multiple ethnically minoritised groups, which masks the severity of underrepresentation of individual ethnic groups. For example, when the data presented in Table 3.8 are disaggregated into high-level ethnic groups (ie Asian, Black, Chinese, Mixed, Other and White), only 1.0% of all Heads of Institution in 2022/23 were from a Black background (UK and non-UK combined).

If we look at the professorial level, we see a similar story with little change in the representation of UK and non-UK Black, Asian and minority ethnic staff. In 2022/23, 11.7% of UK White staff were professors compared with 8.9% of UK Black, Asian and minority ethnic staff (Table 3.20), a difference of 2.8 percentage points compared to a 2.4 percentage point gap reported in 2021/22. This absence of change is consistent across the individual ethnic groups (Table 3.21a), with the gaps in representation at the professorial level remaining consistent with last year.

Recent research exploring the experiences of Black early-career academics highlighted multiple challenges to progression, including unconscious bias, a lack of community, and a lack of clarity around promotion criteria (Franssen et al. 2024), echoing Arday's (2022) study on the impact of precarious employment on ethnically minoritised staff progression and Bhopal's (2016) research on the unique experiences of Black, Asian and minority ethnic academics.

Combined impact on the pipeline, career trajectories, and income

The combination of overrepresentation of Black, Asian, and minority ethnic staff in lower-level roles and underrepresentation in senior roles further supports the leaky pipeline metaphor, where individuals from ethnically minoritised backgrounds face greater difficulties in progressing through academic ranks (as described by Arday 2018; Bhopal 2022; Rollock 2019; UCU 2016). These 'leaks' in the pipeline have a negative impact on the number of Black, Asian and minority ethnic students transitioning into the HE workforce. Talented PhD students are turning away from careers in HE because institutions are not supporting the stability of ethnically minoritised educators (Arday 2021) and because, based on their lived experiences as students, they worry about how they might be treated within an academic career (Garrett 2024).

Aside from discouraging prospective staff from entering the HE workforce, the combination of precarious contracts and fewer opportunities for progression have repercussions on the income and career trajectories of ethnically minoritised staff. The impact on income is particularly salient for non-UK Black, Asian and minority ethnic staff; while the median and mean pay gaps between UK White and UK Black, Asian and minority ethnic staff were almost non-existent (0.0% and 0.6%, respectively), there were substantial gaps among non-UK staff (11.2% and 14.8%, respectively), which widened since 2021/22 (8.5% and 13.0%, respectively)

(Tables 3.30 and 3.31). This is likely a reflection of the latter group's more extreme underrepresentation at senior contract levels. As seen in Tables 3.30a to 3.30e, the impact on the pay gaps between UK White and UK Black, Asian and minority ethnic staff varies across the individual ethnic groups, with the widest gaps between UK Black and UK White academics (11.1% median and 11.4% mean pay gap).

With regards to career trajectories, Rollock (2019) described how moving institutions can have a negative impact on career progression for ethnically minoritised academics because of differences in institutional structures (eg the definition of a senior lecturer at post-92 institutions compared with Russell group institutions). However, Black, Asian and minority ethnic staff are overrepresented amongst academic leavers; between 2020/21 and 2021/22, 16.1% of UK Black, Asian and minority ethnic academics and 22.5% of non-UK Black, Asian and minority ethnic academics left their employment, compared with 17.9% of UK Black, Asian and minority ethnic and 23.9% of non-UK Black, Asian and minority ethnic academics who left between 2021/22 and 2022/23. In both periods, these proportions were greater than those documented amongst UK and non-UK White staff. And while most UK and non-UK Black, Asian and minority ethnic staff leavers moved to another UK institution of some kind (45.8% and 41.8%, respectively) (Tables 3.35 and 3.36), the act of moving may delay progression on the path to professorship.

This may be why a higher proportion of UK Black, Asian and minority ethnic academics who left academia between 2021/22 and 2022/23 went into UK employment (76.8% compared with 62.4% of their White counterparts). This was also the case among non-UK academic leavers (67.0% of non-UK Black, Asian and minority ethnic leavers compared with 57.4% of non-UK White leavers went into UK employment).

Conclusion

This data resonates with broader research findings that emphasise systemic barriers faced by Black, Asian and minority ethnic staff in UK HE, including limited access to opportunities for progression and to senior contract levels, where decisions about hiring, promotion, and institutional culture are made.

It is worth noting however that there have been gradual improvements in the representation of Black, Asian and minority ethnic staff. In the last decade, overall representation of both UK and non-UK Black, Asian and minority ethnic staff has risen from 11.7% in 2013/14 to 19.1% in 2022/23 (Table 3.3). These improvements, and the continuous efforts made by individual staff, institutions, and the sector, should not go unrecognised. Addressing disparities in representation, job security, and career progression requires targeted whole-institution approaches to remove barriers and inspire cultural change. Exploring progress since their 2020 report, *Tackling racial harassment in higher education*, Universities UK (2023) published a set of 13 case studies of institutions' strategic approaches to addressing racism and underrepresentation through internal and external partnership working, engaging their wider community, and developing authentic and inclusive leadership. Combined with additional interventions beyond individual institutions (eg **AHUA's Reciprocal Mentoring Programme**, **Advance HE's Race Equality Charter** and **Diversifying Leadership Programme**), further research that sheds light on the nuances of the career trajectories and experiences of Black, Asian and minority ethnic staff (such as that being undertaken by the **Higher Diversity Coalition**) is essential for developing more inclusive policies and removing barriers to progression.

Detailed commentary

In this section, non-White groups have been aggregated into a single Black, Asian and minority ethnic group. Where possible, additional detail by the ethnic categories used in the 2021 census in England and Wales is also presented. Data in this section has also been further disaggregated by UK and non-UK nationality. This is in recognition of the different experiences UK and non-UK White and Black, Asian and minority ethnic staff may have.

Additional detail for select tables in this section, such as by ethnic group or ethnicity, is available at: **Equality in higher education: statistical reports 2024 – data tables | Advance HE**

3.1-3.2 Overall figures: Of those UK staff with known ethnicity, 12.9% identified as Black, Asian and minority ethnic. However, this proportion varied by country, ranging from 3.7% in Northern Ireland to 14.5% in England. The proportion of staff who identified as Black, Asian and minority ethnic was considerably higher among non-UK staff at 39.7%. Again, this proportion varied by country, ranging from 16.8% in Northern Ireland to 42.1% in Wales. Overall, ethnicity was not known for 7.7% of UK staff and 11.3% of non-UK staff.

Among both UK and non-UK staff, the largest Black, Asian and minority ethnic group was Asian, making up 42.4% of UK Black, Asian and minority ethnic staff and 35.7% of non-UK Black, Asian and minority ethnic staff. The smallest Black, Asian and minority ethnic group for UK staff was Other (8.7%), while for non-UK staff it was Mixed (11.0%).

3.3 Trends: Between 2003/04 and 2022/23, the proportion of all staff who were UK White steadily decreased (from 83.1% to 66.9%), while all other groups increased, most notably those from non-UK White backgrounds (from 8.3% to 14.0%).

During this same period, the proportion of all staff who were UK Black, Asian and minority ethnic increased from 4.8% to 9.9%, and the proportion of non-UK Black, Asian and minority ethnic staff increased from 3.8% to 9.2%.

The increase in staff who were UK Black, Asian and minority ethnic between 2003/04 and 2022/23 was more pronounced among professional and support staff (from 4.8% to 10.6%; 5.8 percentage points) compared with academic staff (from 4.8% to 9.4%; 4.6 percentage points). It was the reverse case for non-UK Black, Asian and minority ethnic staff: between 2003/04 and 2022/23, the increase in proportions of non-UK Black, Asian and minority ethnic professional and support staff was smaller (from 2.4% to 4.7%; 2.3 percentage points) compared with academic staff (from 5.6% to 13.0%; 7.4 percentage points).

3.5 Contract type: Among both UK and non-UK academic staff, a higher proportion of Black, Asian and minority ethnic staff were on fixed-term contracts (29.0% and 46.6%, respectively) than White staff (23.3% and 31.7%, respectively). This was also the case for professional and support staff, though the difference between the proportion of non-UK Black, Asian and minority ethnic staff on fixed-term contracts compared with non-UK White staff (11.1 percentage points, 31.6% and 20.5% respectively) was less pronounced than the difference for non-UK academic staff (14.9 percentage points).

3.8 Contract level: UK Black, Asian and minority ethnic staff were underrepresented in the highest contract levels and overrepresented in the lowest. Just 7.2% of UCEA level 2 staff were Black, Asian and minority ethnic (the second highest contract level), compared with 16.3% of staff on the lowest XpertHR level P (simple task providers). This was also the case among non-UK staff, although the proportion of staff who were Black, Asian and minority ethnic at each level was higher than that of UK staff (16.7% and 56.5%, respectively).

Among UK staff, Black, Asian and minority ethnic representation at the highest contract level (Heads of Institutions) was 9.9% in 2022/23 (compared with 9.0% in 2021/22 and 7.4% in 2020/21). For non-UK staff, Black, Asian and minority ethnic representation among Heads of Institutions in 2022/23 decreased from 17.4% to 16.7%.

3.11 Occupational group: Among UK academic staff, Black, Asian and minority ethnic staff comprised 13.8% of those in professional occupations (SOC2) compared with just 7.2% of those who worked as managers, directors and senior officials (SOC1). This gap was wider among non-UK academics, of whom Black, Asian and minority ethnic staff comprised 40.7% of those in SOC2 compared with 20.3% in SOC1.

Among UK professional and support staff, Black, Asian and minority ethnic staff comprised 15.9% of those in sales and customer service occupations (SOC7) compared with 8.2% of those who worked as managers, directors and senior officials (SOC1).

Non-UK Black, Asian and minority ethnic staff had higher representation in SOC1 (21.1%) compared to UK Black, Asian and minority ethnic staff, but the occupational group with the highest representation of non-UK Black, Asian and minority ethnic professional and support staff was SOC9 (elementary occupations), of which 52.7% were Black, Asian and minority ethnic.

3.14 Research/teaching contracts: A higher proportion of non-UK Black, Asian and minority ethnic staff were on research-only contracts (34.9%) than non-UK White staff (26.6%), while the relevant proportions amongst UK staff were relatively similar (16.4% of UK Black, Asian and minority ethnic staff and 15.3% of UK White staff).

Similar proportions of UK Black, Asian and minority ethnic and White staff were on teaching and research contracts, but among non-UK academics, lower proportions of Black, Asian and minority ethnic staff were on teaching and research contracts (48.4% of White staff compared with 36.2% of Black, Asian and minority ethnic staff).

Similar proportions of both UK and non-UK Black, Asian and minority ethnic and White staff were on teaching only contracts.

3.15, 3.16, 3.18 SET subject areas: Overall, 52.7% of UK White academics and 55.6% of UK Black, Asian and minority ethnic academics worked in SET subjects in 2022/23. Subject areas with the highest proportions of UK Black, Asian and minority ethnic staff were clinical dentistry (25.5%), electrical, electronic and computer engineering (24.5%) and chemical engineering (23.7%). In contrast, just 2.8% of those who worked in archaeology and 5.5% of those who worked in veterinary science were UK Black, Asian and minority ethnic.

42.6% of non-UK SET academics were Black, Asian and minority ethnic in 2022/23, compared with 39.5% in 2021/22. Similar variations in representation of non-UK Black, Asian and minority ethnic academics by subjects were observed as those among UK staff. For instance, Black, Asian and minority ethnic staff comprised more than half of non-UK academics working in electrical, electronic and computer engineering (63.2%), but only 17.8% of those working in archaeology.

3.17, 3.19 Non-SET subject areas: Overall, just 13.0% of UK academics who worked in non-SET subjects were Black, Asian and minority ethnic, compared to 14.4% for SET subjects. The individual subject areas with the highest proportions of UK Black, Asian and minority ethnic academics were business and management studies (24.9%) and economics and econometrics (20.9%). In contrast, just 3.9% of those working in sports science and leisure studies were UK Black, Asian and minority ethnic.

37.9% of non-UK non-SET academics were Black, Asian and minority ethnic in 2022/23, compared with 33.8% in 2021/22. Similar to that observed within SET subject areas, there remained clear variations by individual subjects: Black, Asian and minority ethnic staff comprised 57.0% of non-UK academics who worked in business and management studies, but just 7.6% of those who worked in classics.

3.20 Professors: Among UK academics, there was a small difference between the proportions of White and Black, Asian and minority ethnic staff who were professors (11.7% and 8.9% respectively, a difference of 2.8 percentage points). However, there were notable differences in the proportions of professors among the UK Black, Asian and minority ethnic groups. For example, 17.6% of UK Chinese academics were professors compared with just 3.8% of UK Black academics. Non-UK Chinese academics also had the highest degree of representation (4.4% of whom were professors) while the lowest representation was again among non-UK Black academics (1.9% of whom were professors).

The gap in professorial status between non-UK White and non-UK Black, Asian and minority ethnic academics was wider, with 11.6% of non-UK White academics being professors compared with 3.8% of non-UK Black, Asian and minority ethnic academics.

3.23 Senior managers: The proportion of UK White academics that were senior managers (0.9%) was slightly higher than that of UK Black, Asian and minority ethnic academics (0.6%). A similar pattern was observed for non-UK academics, where 0.3% of non-UK White academics were senior managers compared with 0.1% of non-UK Black, Asian and minority ethnic academics.

3.28 Pay spine range: Although a larger proportion of White academic staff were on the highest pay spine of £65,578 or more compared to Black, Asian and minority ethnic staff, the difference was most pronounced among non-UK academics, with 20.0% of non-UK White staff on this pay spine compared with 7.4% of non-UK Black, Asian and minority ethnic staff. Among UK academics, 20.8% of UK White staff were on this pay spine compared with 18.6% of UK Black, Asian and minority ethnic staff.

3.30-3.31 Median/mean pay gaps: Overall, the median and mean pay gap between UK White and UK Black, Asian and minority ethnic staff stood at 0.0% and 0.6%, respectively. The median and mean ethnicity pay gaps were substantially wider among non-UK staff, at 11.2% and 14.8%, respectively. The ethnicity pay gaps were particularly pronounced between non-UK Black, Asian and minority ethnic and non-UK White academic staff (a 14.1% median pay gap and a 16.4% mean pay gap) compared with UK academic staff (a 3.2% median pay gap and a 2.2% mean pay gap).

Notably, median and mean ethnicity pay gaps among UK staff were largest in London (12.1% and 14.4%, respectively). Aside from the pay gaps in England, all ethnicity pay gaps were negative, meaning that UK Black, Asian and minority ethnic staff were on average paid more than UK White staff. This was not the case among non-UK staff, where median and mean ethnicity pay gaps were all in favour of White staff, considerably wider, and varied less across the different countries.

3.34 Leavers: Among both UK and non-UK leavers, a higher proportion of Black, Asian and minority ethnic academics left their institution between 2021/22 and 2022/23 than White staff. 17.9% of UK Black, Asian and minority ethnic and 23.9% of non-UK Black, Asian and minority ethnic academics left in this period, compared with 15.1% of UK White and 18.5% of non-UK White academics.

3.35-3.36 Leaving destinations: Among UK academic leavers with a known leaving destination, a higher proportion of Black, Asian and minority ethnic leavers went into UK employment than White leavers (76.8% and 62.4% in 2022/23, compared with 72.4% and 58.0% in 2021/22). This was also the case among non-UK academic leavers (67.0% of non-UK Black, Asian and minority ethnic leavers compared with 57.4% of non-UK White leavers went into UK employment), both of which have risen considerably since 2021/22 (57.8% and 49.8%, respectively).

Sex

Overview

Addressing sex and gender disparities in the HE sector has been on the agenda of UK institutions for some time, from the creation of the **Athena Swan Charter** in 2005, now embedded across UK HEIs, to the increased emphasis on effective Gender Equality Planning since the introduction of Gender Equality Plans as a requirement to participate in Horizon Europe (Rosa and Clavero 2021). Some progress has been made with increasing numbers of female professors over the last decade, from 21.7% in 2012/13 to 30.8% in 2022/23 (an increase of 9.1 percentage points) and improved representation of female academic senior managers from 27.9% in 2012/13 to 39.2% in 2022/23 (an increase of 11.3 percentage points). Despite these improvements, female staff are still underrepresented in senior positions in UK HE and overrepresented in professional support service roles, and on part-time and fixed-term contracts. Additionally, despite small reductions, pay gaps have persisted for both professional support and academic staff.

Despite females making up the majority of staff in HEIs, in general, as the seniority of contract levels increased, the proportion of female staff decreased. At the most senior level (i.e Head of Institution), only 32.7% were female. Additionally, at the most junior level for professional support staff (Xpert HR Level P) 65.9% were female. For academic staff, there were also disproportionate numbers of male professors, compared to female professors (69.2% male, 30.8% female). This represents the 'leaky pipeline' for females in UK HE, where barriers exist that prevent female staff reaching senior and leadership positions (Ayyildiz and Banoglu 2024). Many factors might contribute to the drop-off of females at key points of academic and professional

support staff careers, including but not limited to women undertaking the majority of family and caring responsibilities, lack of female role models, differences in rewarding and recognition, and disparities in contract types which mean that women are disproportionately represented in part-time and fixed-term roles (Ayyildiz and Banoglu 2024; Barnard, Arnold, Munir and Bosley 2024; Davies, Brighton, Reedy, and Bajwah 2022).

As well as the disproportionate number of females in senior and leadership positions, there continues to be disparity in the types of contracts and roles carried out by male and female staff. 75.9% of male staff worked full-time compared to 62.2% of female staff. Additionally, the majority of staff on part-time contracts were female, with a more significant sex difference for those in professional support roles (56.8% academic staff, 79.4% professional support staff). There were also differences in contract type, with the majority of academics on full-time, open-ended/permanent contracts being male (56.6% male, compared to 43.4% female). This represents the casualisation and precariousness present in HE including the reliance on fixed-term, temporary contracts (University and College Union **2021; 2022; 2023**). The figures show the ongoing disparity in employment conditions for females and males in higher education, with females disproportionality represented in part-time and less secure roles.

Additionally, proportionally more male academics (47.0%) held teaching and research contracts than female academics (38.5%) and more female academics were on teaching only contracts (39.8%) compared with male academics (31.6%). Reward and promotion systems in UK universities for academics tend to emphasise both teaching and research, so having more females in teaching only contracts may contribute to the leaky pipeline of women in senior and leadership positions (Morris, Hinton-Smith, Marvell, and Brayson 2021).

Looking at professional support staff, despite the majority being female (62.8%), there was a clear sex divide in many occupational groups, such as administrative and secretarial occupations (77.6% female) and process, plant and machine operatives (78.4% male), reflecting sex differences in the division of labour in UK HE professional and support services (Morris, Hinton-Smith, Marvell, and Brayson 2021).

In terms of pay, a larger proportion of female staff were in the lowest salary bands, with 65.2% of professional support staff earning below £30,000 being female, compared to 34.8% male, and 53.0% of academics in this pay band being female, compared with 47.0% male. Among academic staff, 39.3% of female academics earned over £50,000 compared with 49.2% of male academics. This difference was also present among professional support staff, where 11.8% of female staff earned over £50,000 compared with 17.7% of male staff. Among academic staff, the pay gap was the widest for managers, directors and senior officials (17.3% median pay gap and 18.2% mean pay gap). Again, this relates to the leaky pipeline including the overrepresentation of females in part-time roles and gendered differences in reward, recognition and recruitment (Stephenson 2024), as fewer females occupy the higher-paying roles, which are typically associated with the more senior levels in HE. This is evident in the persistence of pay gaps, highest among academic staff, though still evident among professional support staff.

Despite some progress in reducing sex disparities in HEIs, it is clear that there is still work to do to achieve gender equity, particularly in addressing pay disparities, improving representation in senior roles, and ensuring equal opportunities across all contract types and employment conditions. However, initiatives such as the **Athena Swan Charter**, **Horizon Europe's** and **UKRI's** gender equality

plans, female leadership development programmes (eg Advance HE's **Aurora** and **Senior Women Leadership Development** programmes), and wider work on sexual misconduct and harassment (such the Office for Students inclusion of this as a **new condition** for registration, though student-focused), are all testament to the considerable ongoing efforts across HE to address these inequities.

Detailed commentary

Additional detail for select tables in this section, such as by subject area, academic starters and leavers, is available at: **Equality in higher education: statistical reports 2024 – data tables | Advance HE**

In 2017/18, HESA replaced the legal sex field with the sexual identification field and presented three options, 'Female', 'Male' and 'Other'. Since the 2022 report, the data from this field are referred to as 'sex' (instead of 'gender') and, to maintain comparability across reports, limited to those who identified as 'Female' or 'Male'. However, where possible, data for staff who identified as 'Other' are included in the online tables.

4.1-4.2 Overall figures: In 2022/23, 55.0% of staff working in UK HEIs were female and 45.0% were male, continuing the trend of female staff increasing and male staff decreasing slowly since 2003/04.

4.3 Contract Mode: 75.9% of male staff worked full-time compared to 62.2% of female staff. Among both academic and professional support staff, the majority of staff on part-time contracts were female (56.8% of academic staff and 79.4% of professional and support staff).

4.4-4.6 Contract type: Among professional support staff, roughly the same proportions of female and male staff were on open-ended/permanent contracts (85.3% and 86.9%, respectively). There were slightly greater sex disparities among academic staff on open-ended/permanent contracts (68.9% of female staff and 71.1% of male staff).

43.4% of academic staff on full-time, open-ended/permanent contracts were female, while 56.6% were male. Compared to 2021/22 there were slightly more females on full-time, open-ended/permanent contracts and slightly fewer males. Among academic staff on part-time contracts, a higher proportion of female staff had an open-ended/permanent contract compared with male staff (57.9% and 54.9%, respectively).

81.1% of part-time professional support staff on open-ended/permanent contracts were female, while 18.9% were male.

4.7-4.8 Contract level: In general, as the seniority of contract levels increased, the proportion of female staff decreased. For example, 68.3% of assistant professional or administrative staff (XpertHR level M) were female compared with 32.7% of Heads of Institutions.

For both academic and professional support staff, female staff were underrepresented in senior positions. For example, at the Head of Institutions contract level, 65.9% of academic staff and 71.4% of professional support staff were male. Among professional support staff, female staff were overrepresented in junior positions, such as at XpertHR Level M contracts, where they constituted 69.9% of staff.

4.9-4.10 Staff by activity, occupational group and sex: 51.0% of academic managers, directors and senior officials were male. In contrast, 55.6% of professional support staff managers, directors and senior officials were female. Among professional support staff there was a clear sex divide in many occupational groups, such as administrative and secretarial occupations (77.6% female) and process, plant and machine operatives (78.4% male).

Within each occupational group, the majority of professional support staff on part-time contracts were female except among SOC8 staff (process, plant and machine operatives; 55.0% male).

4.11 Research/teaching contract: More male academics held teaching and research contracts, and similar numbers of female academics held teaching and research contracts and teaching only contracts. Proportionally more male academics (47.0%) held teaching and research contracts than female academics (38.5%). More female academics were on teaching only contracts (39.8%) compared with male academics (31.6%).

4.12-4.13 SET subject areas: Overall, 54.5% of SET academic staff were male. Subject areas with notably high proportions of male staff included electrical, electronic & computer engineering (83.1%), mechanical, aero and production engineering (80.7%), and physics (77.0%). SET subject areas with notably high proportions of female academic staff were nursing and allied health professions (74.9% female staff) and psychology and behavioural sciences (65.6% female staff).

4.14 Non-SET subject areas: Non-SET subjects had a slightly higher number of female than male academic staff (52.4% and 47.6%, respectively). Within some subject areas a more marked sex divide was present, such as in education (69.6% female) and economics and econometrics (68.1% male).

4.15 Professors: 69.2% of professors were male. The proportion of male professors was greater than the proportion of female professors, regardless of whether they were employed in SET or non-SET subject areas, or part- versus full-time contracts. There was also a higher proportion of male professors in SET subjects (73.7%) than non-SET subjects (62.2%).

Despite female academics forming the minority among professors, their representation has improved noticeably over the last decade, from 21.7% in 2012/13 to 30.8% in 2022/23 (an increase of 9.1 percentage points). This increase represents a gradual but positive change, particularly compared to the growth rates for the populations of male and female academic professors as a whole.

4.16 Senior managers: The majority of academic senior managers were male (60.8%). This was most evident among SET subjects where male academics accounted for 70.0% of senior managers compared to 56.7% of senior managers in non-SET subjects.

Although a minority of academic senior managers were female, their representation has improved over the last decade from 27.9% in 2012/13 to 39.2% in 2022/23 (an increase of 11.3 percentage points).

4.17-4.18 Salary and pay spine range: Among academic staff, 39.3% of female academics earned over £50,000 compared with 49.2% of male academics. This difference was also present among professional support staff, where 11.8% of female staff earned over £50,000 compared with 17.7% of male staff.

Among academic staff on the highest pay spine range (\geq £65,578), 64.2% were male. The proportion of female staff on the highest pay spine range was just under half that of male staff (13.5% of female academics, compared with 22.9% of male academics).

4.19-4.20 Pay gap by activity and occupational group: Overall, the median pay gap between male and female staff in 2022/23 was 9.0%; 0.5% higher than in 2021/22, and the mean pay gap was 13.7%, compared with 14.2% last year. The pay gap was most notable in Scotland, with a median pay gap of 16.2% and mean pay gap of 14.4%. Both the median and mean pay gaps were wider among academic staff than professional and support staff.

Among academic staff, the pay gap was the widest for managers, directors and senior officials (17.3% median pay gap and 18.2% mean pay gap). The widest pay gap for professional support staff was in skilled trades occupations (19.9% median pay gap and 11.1% mean pay gap).

4.21 Academic pay gaps: The median and mean pay gaps for UK professors were 7.8% and 6.7%, respectively. The median pay gap was widest among professors in Northern Ireland (9.9%) while the widest mean pay gap was in Wales (7.1%). Overall, the pay gap was higher among non-professors (an overall median pay gap of 8.5% and a mean pay gap of 8.9%) than among professors.

4.22 Academic staff by leaving status and sex: A modestly higher proportion of female academic staff left their position than male academic staff (18.3% and 17.3%, respectively), though this is driven by UK academic staff leavers (16.8% of female and 15.5% of male academic staff).

4.23 UK academic staff leavers by known leaving destination and sex: Among UK academic leavers with a known destination, the proportion of female academic leavers in UK employment (68.6%) was greater than that of male academic leavers (64.6%). In contrast, the proportion of male academic leavers in non-UK employment was greater than the proportion of female academic leavers (3.6% and 2.4%, respectively). The proportion of female academic leavers no longer in regular employment (29.0%) was slightly smaller than the proportion of male academic leavers in this category (31.9%).

4.24 Non-UK academic staff leavers by known leaving destination and sex: 65.3% of non-UK female leavers remained in UK employment, compared with 60.4% of non-UK male leavers. In contrast, 24.8% of male non-UK academic leavers went on to non-UK employment, compared with 17.2% of female non-UK academic leavers. 17.5% of non-UK female academic leavers were not in regular employment, compared with 14.7% of male academic leavers.

Intersectionality

Overview

Intersectionality means recognising that people's identities and social positions are shaped by multiple factors, which create unique experiences and perspectives. A person is not, for example, a female on one hand and disabled on the other; rather they are the combination of these at the same time, ie a disabled female.

Please note that tables exploring how people's identities relate to their median and mean pay present information in two ways. For example, in Table 5.11, reading down the female column shows the pay discrepancy between Black, Asian and minority ethnic and White female staff, while reading across the Black, Asian and minority ethnic row shows the pay gap between Black, Asian and minority ethnic female and male staff.

In 2017, Advance HE published a research and data briefing on *Intersectional approaches to equality research and data that can be downloaded here: www.advance-he.ac.uk/knowledge-hub/intersectional-approaches-equality-research-and-data*. In 2018, there was a supplementary publication with six case studies to showcase good practice related to the implementation of intersectional work in EDI. This can be downloaded here: www.advance-he.ac.uk/knowledge-hub/intersectional-approaches-equality-and-diversity.

Most recently, Advance HE has been committed to exploring a holistic approach to EDI, that will support members to maximise their impact across all equality areas. All relevant project work can be accessed here: www.advance-he.ac.uk/membership/all-member-benefit-projects/exploring-a-holistic-approach-to-equality-diversity-and-inclusion.

Detailed commentary

5.1 Age and disability status: Disability disclosure rates were highest among staff in the 25 and under age group (9.9%), and lowest among those aged 66 and over (5.1%).

5.2 Age and ethnicity: Continuing a historical trend (e.g. see **Department for Education 2020**), overall, Black, Asian and minority ethnic staff had a younger age profile than White staff. Among UK staff, 43.9% of Black, Asian and minority ethnic staff were aged 40 and under, compared with 37.9% of White staff. This was also true among non-UK staff, where 68.8% of Black, Asian and minority ethnic staff were aged 40 and under, compared with 51.0% of White staff.

5.3 Age and sex: Among professional and support staff, female staff made up the majority of staff in all age groups. In contrast, among academic staff, male staff and female staff comprised the majority in five age bands each. Male staff formed the majority in all the groups above 51 years of age, whereas female staff dominated the younger age groups, with the exception of the age group 26-30, where males held the marginal majority (50.5%).

In general, the proportion of male academics increased with age, rising from 47.6% of academics aged 25 and under to 66.6% of those aged 66 and over. In contrast, among professional and support staff, there was a consistent majority of female staff within every age group, making up over 61.0% of all age groups except for the two oldest ones, where female staff made up 58.2% of those aged 61 to 65 and 54.2% of staff aged 66 and over.

5.4 Ethnicity and disability status: Disability disclosure rates were lower among non-UK nationals than UK nationals (3.8% and 8.6% respectively), which was true regardless of ethnicity. Amongst both UK and non-UK staff, disability disclosure rates were slightly lower for Black, Asian and minority ethnic staff than for White staff (e.g., amongst UK staff, 7.4% of staff from Black, Asian and minority ethnic backgrounds disclosed as disabled compared with 8.8% of White staff).

However, the proportion of staff disclosing as disabled varied considerably by ethnic group. For both UK and non-UK staff, disability disclosure rates were highest among those identifying as having a mixed ethnic background (11.5% of UK and 5.9% of non-UK nationals) and lowest among Chinese staff (2.8% and 1.3%, respectively).

5.5 Disability status and sex: Overall disability disclosure rates were higher among female staff compared to male staff (7.9% and 6.2%, respectively). However, disclosure rates by female and male staff varied by impairment type; roughly two out of three staff who disclosed a mental health condition (66.6%), multiple disabilities, impairments or conditions (64.4%), a disability, impairment or condition outside of the listed answer options (64.2%), a long-term illness or health condition (62.9%) and a physical impairment (62.4%) were female. In comparison, 56.2% of those disclosing a developmental condition and 56.0% of those disclosing a social/communication condition were male.

5.6 Ethnicity and sex: A slightly higher proportion of male staff were from Black, Asian and minority ethnic backgrounds than female staff (20.4% of male staff compared with 18.0% of female staff). Non-UK staff were more ethnically diverse than UK national staff (39.7% of non-UK national staff were Black, Asian and minority ethnic compared with 12.9% of UK national staff), and this was more pronounced among non-UK male staff than female staff (43.9% of non-UK male staff were Black, Asian and minority ethnic compared with 36.0% of non-UK female staff). This was not the case among UK nationals, where the proportions of staff from Black, Asian and minority ethnic backgrounds were similar for both male and female staff (12.9% and 13.0%, respectively).

5.7 Academic roles by ethnicity and sex: For both White and Black, Asian and minority ethnic staff, the gaps between male and female representation were more pronounced among professors than other academics. For example, 59.5% of professors were White males, and 27.7% White females. Similarly, 9.1% of professors were Black, Asian and minority ethnic males, compared to just 3.6% of Black, Asian and minority ethnic females. In comparison, 36.5% of non-professorial academics were White males and 40.0% were White females.

Black, Asian and minority ethnic/White identity also differed between UK and non-UK national professors, with disparity between the sexes being greatest between non-UK Black, Asian and minority ethnic nationals. Specifically, 13.5% of non-UK national professors were Black, Asian and minority ethnic males, whereas 4.7% were Black, Asian and minority ethnic females. In contrast, 7.6% of UK national professors were Black, Asian and minority ethnic males and 3.2% were Black, Asian and minority ethnic females.

5.8 Senior managers by ethnicity and sex: The large majority of academic senior managers were from a White background across both UK and non-UK nationals (54.4% White males and 36.4% White females). Among UK nationals, 55.2% of academic senior managers were White males, 35.8% were White females, whereas just 3.3% of those were Black, Asian and minority ethnic females and 5.6% Black, Asian and minority ethnic males. Among non-UK national academic senior managers, 45.9% were White males, 42.0% White females, 9.6% were Black, Asian and minority ethnic males and 2.5% Black, Asian and minority ethnic females.

5.9 Academic roles by sex and ethnicity: Overall, higher proportions of White staff were working in professorial roles (11.7%) than Black, Asian and minority ethnic staff (5.9%). This was the case for both male and female staff, with 3.7% of Black, Asian and minority ethnic female staff working as professors compared with 7.4% of White female staff, as well as 7.9% of Black, Asian and minority ethnic male staff working as professors compared with 15.9% of White male staff.

5.10 Senior managers by sex and ethnicity: The lack of Black, Asian and minority ethnic representation among academic senior managers identified in Table 5.8 was present across each of the Black, Asian and minority ethnic groups for both male and female staff. Again, this was more pronounced among UK nationals compared to non-UK nationals.

5.11-5.13 Median/mean pay gaps by ethnicity, sex and disability status:

Median and mean sex pay gaps were present among both Black, Asian and minority ethnic staff (8.5% and 11.3%, respectively) and White staff (9.5% and 14.5%, respectively). However, these were slightly wider amongst White staff. There were also gaps between the median and mean salaries of Black, Asian and minority ethnic and White males (4.0% and 7.4%, respectively), which were somewhat larger than the gaps between the median and mean salaries of Black, Asian and minority ethnic and White females (2.9% and 4.0%, respectively).

Median and mean sex pay gaps were larger among non-disabled staff (8.5% and 14.0%, respectively) than among staff disclosing a disability (5.7% and 8.1%, respectively). Median and mean disability pay gaps were present among both female (5.7% and 5.3%, respectively) and male staff (8.5% and 11.4%, respectively), albeit considerably larger among men.

Median and mean disability pay gaps were larger among White staff (8.5% and 10.2%, respectively) than among Black, Asian and minority ethnic staff (2.5% and 4.6%, respectively). Moreover, although there were gaps between the median and mean salaries of Black, Asian and minority ethnic and White non-disabled staff (4.3% and 5.7%, respectively), the disability gaps between the median and mean salaries of Black, Asian and minority ethnic and White disabled staff were negative and considerably smaller. Specifically, Black, Asian and minority ethnic disabled staff earned more than their White peers (median Black, Asian and minority ethnic/White pay gap of -1.9% and mean equivalent pay gap of -0.1%).

Experimental data

Overview

The Equality Act 2010 extended the number of protected characteristics to cover additional areas including gender reassignment (referred to herein as trans status), religion and belief (or none), and sexual orientation.

In 2022/23, HESA made data on these characteristics mandatory for institutions in England and Wales to return. This has resulted in there being less 'blank' data across the sector, but also, within institutions returning data, considerable changes to the numbers of staff disclosing this information. As such, year-on-year comparisons should be undertaken with caution. It is also worth noting that Scottish institutions have the option to return relevant data via a new field, which records the transgender status of a staff member using a question that aligns with the relevant one asked in the Scottish census (see for more information) and that several institutions in Northern Ireland did not return data on staff trans status or sexual orientation. As such, this section presents high level findings on collection and monitoring rates.

Advance HE encourages institutions to collect and return these data where appropriate. Advance HE hopes to provide further detail on these characteristics in future reports as the number of institutions returning these data steadily increases and data becomes more representative.

Further guidance can be found at:

About this data

Data on a staff record is said to be returned if the institution provided any information to HESA about trans status, religion and belief, or sexual orientation. This includes where a staff member selected 'prefer not to say' or refused to provide information about the characteristic in question. Where a staff record was returned to HESA without data, this section reports it as blank. It is not possible to determine from the data presented whether the blank staff records were due to the question being unanswered or unasked.

Detailed commentary

6.1 Overall figures: Overall, the proportion of institutions returning information on trans status, religion and belief, and sexual orientation improved considerably since last year because of HESA making these returns mandatory for institutions in England and Wales. Specifically, 88.2% of institutions returned data on trans status, 97.2% on religion and belief and 96.7% on sexual orientation in 2022/23, compared with 64.6%, 74.8% and 75.7%, respectively, in 2021/22.

6.1 Institutional returns by country: Out of the four nations, Wales had the highest proportion of institutions returning data on the additional protected characteristics, with all nine returning information on trans status, religion and belief and sexual orientation in 2022/23. Return rates were lower for the four institutions across Northern Ireland (25.0% for trans status, and 75.0% for religion and belief and 50.0% for sexual orientation). Despite being mandatory, 97.8% of English institutions returned data on trans status, compared with 99.4% for both religion and belief and sexual orientation.

None of the Scottish institutions returned data on trans status, while 77.8% returned data on both religion and belief and sexual orientation.

6.2 Institutional return rates: Of the institutions that returned information to HESA, more than three quarters had done so for 70% or more of their staff for religion and belief, and sexual orientation (79.5% and 79.9%, respectively). These rates represent slight increases from 2021/22 return rates (78.6% and 75.6%, respectively).

Rates were however lower for trans status, with only 66.1% of the institutions that returned information to HESA having a return rate of 70% or more for this characteristic. Nonetheless, this continues a trend of increasing return rates over time, as the equivalent return rate in 2021/22 was 64.7%.

6.3-6.4 Trans status disclosure rates: Of the staff in institutions that returned trans status data to HESA, 51.3% provided information, 6.8% refused to provide information, and for 41.9% the data field was blank. Compared with last year's disclosure rates (60.1% provided information, 3.6% refused to provide information, and 36.3% blank), this suggests that the shift to mandatory reporting has led to an increase in the proportion of staff refusing to provide this information or leaving the question blank.

Overall, trans status was unknown for 51.0% of all staff working in UK HEIs.

6.3, 6.5 Religion and belief disclosure rates:

Of the staff in institutions that returned religion and belief information to HESA, 66.6% provided information, 10.6% refused to provide information, and for 22.8% the data field was blank.

Overall, religion and belief information, including 'information refused', was not returned to HESA for 24.9% of all staff working in UK HEIs, which is a considerable decrease compared with 2021/22 (41.0%).

6.3, 6.6 Sexual orientation disclosure rates:

Of the staff in institutions that returned sexual orientation information to HESA, 66.3% provided information, 11.3% refused to provide information, and for 22.4% the data field was blank.

Overall, sexual orientation was unknown for 24.5% of all staff working in UK HEIs, which is again a considerable decrease since 2021/22 (40.9%).

6.7-6.10 Intersection between trans status and staff age, disability status, BAME/White identity and sex:

The proportion of all staff for which trans status data was unknown (blank) – not including those for whom information was refused – was comparable across Black, Asian and minority ethnic and White staff, and female and male staff. In contrast, broadly speaking, the proportion of all staff for which data on trans status was unknown increased across age groups, from 50.5% for staff aged 30 and under to 55.7% for those aged 61 and over. There was also a gap between the proportion of unknown trans status data for disabled and non-disabled staff, with information on trans status being unknown for a larger proportion of non-disabled staff (51.7%) than disabled staff (41.6%).

The proportions of staff who refused to provide information on trans status revealed only small differences between age groups, as well as across staff who were disabled or non-disabled, identifying as Black, Asian and minority ethnic or White, and male or female.

Rates of staff indicating that their gender identity differed from that assigned at birth showed little differences across age groups, disability status, Black, Asian and minority ethnic/White identity, or sex, although was slightly larger among younger staff members and disabled staff.

6.11-6.14 Intersection between religion and belief and staff age, disability status, BAME/White identity and sex:

While information on religion and belief was unknown (blank) for 22.8% of all staff, there was a marked difference between the proportion of staff for which these data were unknown among those aged 30 and under (22.2%) and aged 31 to 40 (19.6%), and those aged 61 and over (34.0%), as well as for disabled and non-disabled staff (14.1% and 25.7%, respectively).

Similar proportions of staff refused to provide information on religion and belief across each characteristic (ranging from 7.7% among Black, Asian and minority ethnic staff to 12.2% of those aged 61 and over).

Of staff aged 30 and under, 43.4% indicated that they did not follow a religion or belief system compared with roughly one in five among staff aged 61 and over (19.5%). 39.0% of White staff did not follow a religion or belief system compared with 22.0% of Black, Asian and minority ethnic staff.

6.15-6.18 Intersection between sexual orientation and staff age, disability status, BAME/White identity and sex: The proportion of staff with unknown (blank) information on sexual orientation was larger for staff aged 61 and over (34.6%) than for staff aged 30 and under or 31 to 40 (21.7% and 18.9%, respectively). There was also a gap between disabled and non-disabled staff, with information on sexual orientation being unknown for a larger proportion of non-disabled staff (25.3%) than disabled staff (13.8%). In contrast, the proportions of staff for which sexual orientation data were unknown were relatively similar across BAME/White identity and sex.

Across each of the characteristics, the proportions of staff members who refused to provide information on sexual orientation ranged from 8.7% of Black, Asian and minority ethnic staff to 13.2% of staff aged 61 and over. Rates of staff indicating they were bisexual, gay or lesbian, or other were highest among younger staff (11.8% of those aged 30 and under compared with 2.1% of those aged 61 and over) and among those who had disclosed a disability (16.0% of disabled staff compared to 5.1% of non-disabled staff).

Advance HE helps HE institutions be the best they can be, by unlocking the potential of their people.

We are a member-led, sector-owned charity that works with institutions and higher education across the world to improve higher education for staff, students and society. We are experts in higher education with a particular focus on enhancing teaching and learning, effective governance, leadership development and tackling inequalities through our equality, diversity and inclusion (EDI) work.

Our strategic goals to enhance confidence and trust in HE, address inequalities, promote inclusion and advance education to meet the evolving needs of students and society, support the work of our members and the HE sector.

We deliver our support through professional development programmes and events, Fellowships, awards, student surveys and research, providing strategic change and consultancy services and through membership (including accreditation of teaching and learning, equality charters, knowledge and resources).

Advance HE is a company limited by guarantee registered in England and Wales no. 04931031. Company limited by guarantee registered in Ireland no. 703150. Registered as a charity in England and Wales no. 1101607. Registered as a charity in Scotland no. SC043946. Registered Office: Advance HE, Innovation Way, York Science Park, Heslington, York, YO10 5BR, United Kingdom.
