

Expanding Bow Spring Centraliser

The DTI CT Centraliser Expanding Bow Spring is a hydraulic tool with normally retracted bow springs. When CT fluid flow/pressure at the tool is increased, the bow springs will expand to the tubing I.D. and centralize the tool string. This feature provides an efficient method of centralization and greatly reduces the wear and tear on the springs. The bow springs are replaceable and easily changed out without the need to completely disassemble the tool.

Data Table

Part Number	Outside Diameter	Standard Connection	Will Pass I.D.	Max. Expanded O.D.
CEBS169XX08	1.688"	1.00 AMMT	1.75"	6.50"
CEBS212XX09	2.125"	1.50 AMMT	2.25"	7.00"
CEBS238XX09	2.375"	1.50 AMMT	2.50"	7.25"
CEBS288XX23	2.875"	2.375 PAC	3.00"	7.75"
CEBS312XX23	3.125"	2.375 PAC	3.25"	7.75"
