

Flow Activated Expanding Bow Spring Centraliser

BOW SPRINGS ONLY ACTIVATED WHEN REQUIRED
 HIGH EXPANSION RATIO
 CENTRALISE TOOLSTRING IN THE WELL

Description

The DTI Coiled Tubing Flow Activated Expanding Bow Spring Centraliser is a hydraulic tool with normally retracted bow springs. When the fluid flow/pressure at the tool is increased, the Bow Springs will expand and centralize the tool string.

The Expanding Bow Spring Centraliser provides an efficient method of centralization and greatly reduces the wear and tear on the springs, and the springs only need to be activated when required. In addition, the Bow Springs are replaceable and easily changed out without the need to completely disassemble the tool.

<h3>Features & Benefits</h3>	<ul style="list-style-type: none"> ▪ Bow springs only need to be activated when required. ▪ Reduces wear and tear on the centraliser blades. ▪ Hydraulic force positively centraliser the BHA. ▪ Run in and out of the well without dragging the centralisers. ▪ Centraliser easily replaceable.
