

Extreme Duty Over Pressure Release Joint

- 10,000 PSI rated
- Ultra reliable design
- Secondary shear release

DESCRIPTION

The Pragma Coiled Tubing Extreme Duty Over Pressure Release Joint enables the controlled and safe release of the tool string from the coiled tubing should the tool string get stuck.

The Pragma Coiled Tubing Heavy Duty Over Pressure Release Joint does not require a drop ball to release, making it suitable for use below tools that have restricted ID's, where drop balls cannot pass or where Coiled Tubing operations where wired/fibre optic coiled tubing, or other tool string tools prevent the use of drop balls

In normal operation, the latch mechanism is locked in place by a collar which is held in position by calibrated shock load protected shear pins. To release the joint, applying a predetermined pressure shears the pins and releases the latch collar. An overpull then shears the overpull release pins to separate the release joint and leave an internal fish neck which can be latched with a standard Pragma GS Pulling Tool. The robust Release

Joint can be used where high shock loads, vibrations, tensile force and or torque forces are expected. The tool features a torque through sealed joint that can be released by applying pressure followed by tensile load.

The Pragma Extreme Duty Release Joint is available in standard and H2S service versions.

FEATURES & BENEFITS

- Releases through internal pressure- no drop ball required.
- High torque capacity, suitable for CT drilling operations.
- The lower part of the Pragma Extreme Duty Release Joint has an internal fishing neck which can be latched with a standard PragmaGS pulling tool.
- Simple, inexpensive field redress. All seals are standard 'O' rings. Shear pins utilize standard shear stock (subject to calibration).
- Shear pins can be supplied in either brass or steel to give a comprehensive pressure range to suit most coiled tubing applications.
- Shear pins are positioned inboard to eliminate the possibility of pins vibrating free during CT drilling operations.
- Standard GS Fishing Neck.

All Extreme Duty Over Pressure Release Joints are rated to 10,000 psi.

Part Number	OD	ID	Release Pins (steel)	Fish Neck	Thread
RJHP169AC08	1.688"	0.469"	4 × 2000 psi	1.38" (2" GS)	1.00 AMMT
RJHP175AC08	1.688"	0.469"	4 × 2000 psi	1.38" (2" GS)	1.00 AMMT
RJHP212AC09	2.125"	0.469"	6 × 1100 psi	1.38" (2" GS)	1.50 AMMT
RJHP288AC23	2.875"	0.875"	6 × 1700 psi	2.31" (3" GS)	2.38 PAC

We offer optional equipment, alternative sizes, pressure ratings, temperature ratings, materials and thread connections.
