

Rust Remover HD

Description

Rust Remover HD is a high-performance rust remover for many industrial applications. It is ideal for the fast, efficient removal of rust from decks, bulkheads and other ferrous surfaces. It is based on phosphoric acid and contains inhibitors to prevent flash rusting, after use. Rust Remover HD contains approximately 50% more active rust dissolver than our standard rust remover and is intended to be used in demanding applications where the volume of rust is high or where rapid results are desired.

Application

Once diluted to the desired strength, the product can be used as in a dip-tank or brushed on. For smaller items, immersion is the best method to apply the product. Leave until rust is removed, then rinse with plenty of water, repeat as required. Neutralising solutions are also available from FIS if required.

Dilutions

ALWAYS add the product to water and not the reverse.

Typical dilutions can range from 1:10 to 1:2 (parts product to parts water).

Environmental

Dispose of chemicals in accordance with local environmental legislation.

Handling

Normal precautions should be taken for handling chemicals. Protective clothing, eye protection and gloves should be worn. For further details please refer to the safety data sheet.

Storage

Store in a cool, dry location between 5°C and 25°C. Protect from freezing. Avoid direct sunlight and extreme temperatures. Store the product sealed in the original container to avoid air exposure. Some products may settle during storage or transportation, ensure thorough mixing before use. See safety datasheet for list of incompatible materials and other relevant information

Properties

Appearance: Clear liquid

Density @ 20°C: 1.2-1.3

pH (concentrated): <2

Shelf Life

Storage: 24 months

Available in the following containers
