

M67 St Anne's Road Bridge replacement

Summer 2023

Scheme update

Welcome to the summer edition of the St Anne's Road bridge replacement scheme newsletter, keeping you up to date with the latest progress and information on our £23 million renewal scheme.

Since our last update in 2022, we have started work on replacing St Anne's Road bridge over the M67.

Due to its age, the bridge required extensive structural repairs and replacing it entirely was a quicker, safer, and more practical option than repairing it.

The bridge was closed on Tuesday 10 January 2023 and since then United Utilities and Cadent have diverted water, gas and electricity supplies so that they are maintained during construction.

We're now in the first phase of our demolition works, which started in June and will take approximately four months to complete.

These works involve demolishing the eastern side of the bridge and remodelling the supporting walls so we can build a new section of the bridge to carry vital services such as a water main across the M67.

During the demolition we will do all we can to reduce the noise impact on local properties and we will ensure the noisiest activities are completed during the day where possible.

We understand the frustration that roadworks can cause. We thank you for your continued patience and understanding whilst we undertake this essential bridge replacement work.

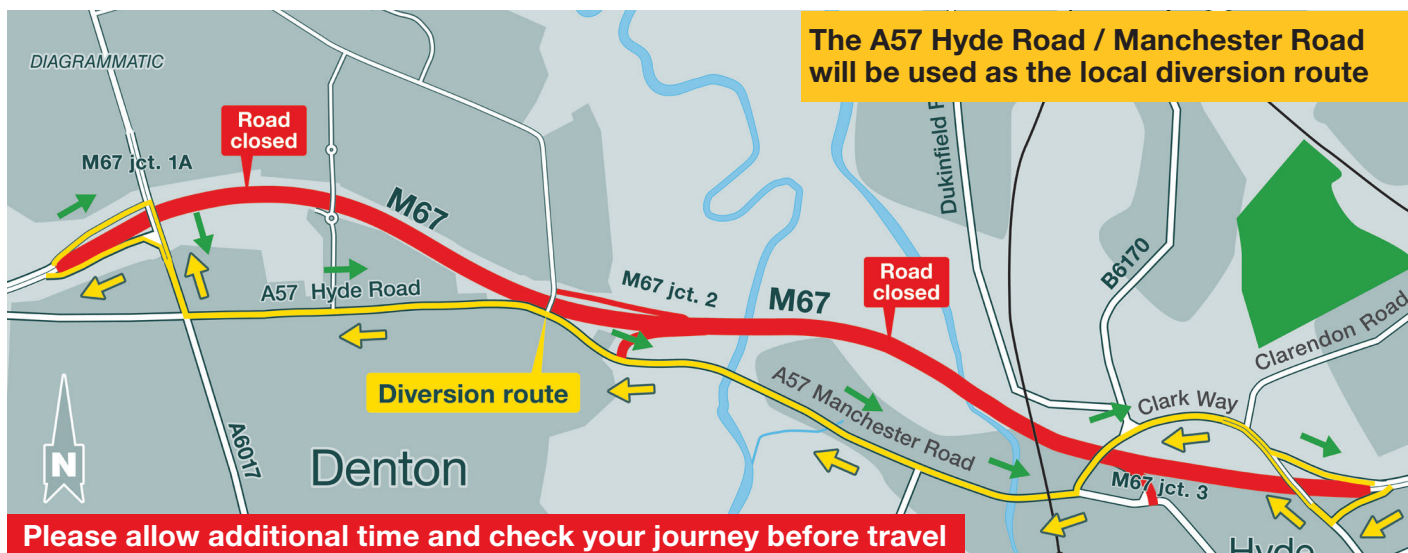

Bridge sections to be removed during M67 weekend closure

M67
Weekend Closure

**9pm Friday
18 to 5am
Monday 21
August 2023**

The first phase of our bridge demolition works require the M67 motorway between junction 1a and junction 3 be closed over one weekend this summer, from 9pm on Friday 18 August to 5am on Monday 21 August 2023.

This closure will allow our teams to safely cut out a section of the bridge at the eastern side and remove it from the site.

Signed diversion routes will be in place during the M67 weekend closure. The A57 Hyde Road / Manchester Road will be used as the local diversion route.

Next steps

In autumn, after the first phase of our demolition work is complete, we will install two beams to house utility services such as gas, water and electricity. Following the beams' installation, utility providers will return to make the connections required to divert their services.

To safely install these beams, we'll need to make further carriageway closures on the M67 between junctions 1a and 3. We'll publicise the closure dates once these are confirmed.

How to find out more

In the community

We were proud to put our green fingers to good use and support our construction partners Tilbury Douglas in creating a sensory garden outside New Chapel Unitarian Church in Denton.

Our crew worked with local volunteers of all ages to build a new outdoor area that will help members of the community to connect with nature, tapping into the principles of mindfulness.

Local resident Bill, 84, said: "It's great to see a community coming together. We would always help each other out when I was younger and it's inspiring to see loads of young people motivated to help the community and get more active."
