

Phishing Email Assessment >>

Phishing Email Assessment

Broad-scale and targeted **email phishing attacks** are among the most likely type of cyber attack that businesses are having to contend with today. Such emails can be sent with little risk, and if successful, could trick users into revealing sensitive information such as login credentials, or potentially even result in the installation of malware. Such emails could be sent in mass to all employees when just one successful exploit is needed to compromise the business' sensitive data. Alternatively, specific individuals within the business may be targeted with highly bespoke emails, aiming to leverage that particular employee's privileges.

Pentest People's Phishing Email Assessment simulates both a broad-scale generic email phishing attack, or a realistic targeted attack on key employees. The result of this assessment generates valuable statistics for measuring the effectiveness of business awareness training and procedures.

What Are the Risks?

Email Phishing attacks are becoming more predominant in every industry. It's one of the most universal types of cyberattack and can be used to gain easy access to a businesses network.

Businesses have to make employees aware of such phishing attempts, that can be both broad-scale and targeted (most likely on more high ranking employees). The **Pentest People** Email Phishing Assessment is the perfect solution for training your team and finding the weaknesses in your employees awareness.

How Can We Help?

Pentest People can help alleviate the risks associated with **Email Phishing** by performing either a broad-scale or targeted phishing scenario.

Pentest People have a professional **Email Phishing Service** that can be used to identify flaws that exist within your team in regard to their email phishing awareness. From this assessment you can create professional training protocol so your employees never fall victim to such attacks.

The service would be delivered as part of the **Pentest People Penetration Testing as a Service (PTaaS)** and full access to the **SecurePortal** and other complementary tools would be provided.

All Services Use Our **Innovative SecurePortal**

SecurePortal is a live security platform designed to improve the way you view and manage your Penetration Test results.

Introducing SecurePortal

SecurePortal is a key component of **Penetration Testing as a Service** and provides customers of **Pentest People** with a live platform of engagement and also helps you manage the current security posture of your organisation based on the information gathered from our **Penetration Testing** services.

- ✓ Eases the administrative burden of planning a Penetration Testing engagement
- ✓ Provides digital access to your report
- ✓ Tracks the state of your vulnerabilities automatically
- ✓ Alerts you when new threats are relevant
- ✓ Provides a simple way to filter your report data

The SecurePortal offers our clients a multitude of features

Live Vulnerability Dashboard

SecurePortal provides a single dashboard view of all of the identified vulnerabilities across your infrastructure. Data from different assessment types is combined to help you see the full security posture of your organisation.

Receive overview and trend data of all of the current security issues you face in your organisation. Receive useful trend information such as the top vulnerable hosts, and the most common vulnerabilities within your infrastructure.

Helping You Engage With Pentest People

Customers are introduced to **SecurePortal** early in the sales process and all sales proposals are accessed and downloaded securely through the **SecurePortal**.

Once the agreement to proceed has been made, all of the project management tasks associated with our various **Penetration Testing** services are performed on the **SecurePortal** using various secure web-based forms rather than relying on the unsecured emailing of various documents.

Helping You Manage Your Vulnerabilities

Until now, the traditional deliverable from a **Penetration Test** engagement has been a lengthy report. This is usually provided in a PDF file format and can run into the hundreds of pages.

Pentest People have developed a solution to this issue where you interact with your vulnerabilities within the **SecurePortal**. This allows you to quickly search for vulnerabilities rather than scanning through a lengthy document.
