ITHACA: JACKY FIELD POST DECOMMISSIONING CLEARANCE / VERIFICATION TRAWL SWEEPS

This is to certify that the MV "Westro" PD20 has carried out a post decommissioning sea bed / trawl verification sweep of the Jacky Field. Using best endeavours and practice available, the 500 metre safety zone and midline tee structure location have been trawled to ascertain if any oil field related obstructions remain that could affect current and future fishing activity in the defined area.

Jacky 500m Safety Zone

While the majority of the safety zone was found to be clear, a snagging occurred at the wellhead centre location (**58° 11.027'N, 002° 58.795'W**). This position therefore should be avoided by fishermen until further investigations take place to identify the cause of the snagging.

Jacky Midline Tee Location

To the best of our knowledge, the midline tee location (**58° 09.13'N, 003° 01.88'W**) has been successfully cleared of all equipment / infrastructure and is considered safe to allow normal fishing operations to proceed.

Signed for on behalf of the Owners of MV "Westro" PD20
