**your guide to social shipping & returns - and
AI-validated label-free shipping**

make shipping social with appfree

Our solution utilises the WhatsApp platform to create a unique experience for consumers who want to send parcels without downloading new apps.

The flexibility of appfree means that we can easily adopt a carrier's existing barcode label or QR code standards - integration made easy!

The beauty of appfree is that there is no download necessary - over 3.2 billion people use WhatsApp globally!

write, scan go: integration with labelfree

It optionally incorporates our labelfree solution, allowing the customer to simply write a handwritten code on the parcel packaging in place of a barcoded label. This is then validated by using the phone camera to take a picture of the code - leaving the customer to send or return the parcel with the unique identifier already validated.

getting started

- Type "Help" for a list of commands
- Type "Cancel" to reset at any time
- Demo data and sample message flows are included — real setups will be tailored to your needs

For sending an item, enter the address like this (no commas):

Andrew Smith
10 High St
London
W1 4RT

For validation, upload a clear photo of the handwritten label showing the code. If the code is not recognised, correct and retry.

Our appfree solution is fully integrated with the stampfree.ai platform, meaning that anything you do via WhatsApp can also be seen on our Customer App.

It also means that these parcels can be validated, handled and delivered by a PUDO or carrier employee using our carrier solutions.

For payment, use the dummy card number 4242 4242 4242 with any valid expiry and 3-digit PIN — or you can use apple/google pay (it won't charge your card)
