Artificial intelligence (AI) use policy for peer reviewers

To uphold the strict confidentiality of authors' work it is imperative that *no part* of any manuscript (including figures, tables and supplementary information) should be uploaded to *any* AI technology.

As a reviewer you *do not* have permission from the authors to upload any part of the unpublished manuscript to AI technologies.

Examples of acceptable use of AI in review:

- Use of AI to organise or order your own notes/thoughts on the manuscript.
- Use of AI to clarify, translate or proofread your own review of the manuscript.
- Use of AI to answer general questions about statistics or methods without specific reference to the data or methods used in the manuscript.

If you are still unsure as to whether the way you would like to use AI to complete your review is permissible, please contact Rebecca Whinter (r.whinter@boneandjoint.org.uk).

If we are made aware of any misuse of AI which contradicts these guidelines, you will be removed from the *Bone & Joint* reviewer list (for all journals).
