Why ODO?

ODO is the latest innovation in Fleet Management.

Manage compliance in your fleet with almost zero effort. Reduce costs through improved vehicle selection and management of maintenance, tyres and fuel. Improve management through complete visibility of your fleet and drivers.

Getting Started

Your Fleet Provider can help you load your vehicles and drivers into ODO. Automatic compliance starts immediately with prompts for MOT's, RFL renewal, Services and driver licence checks. You just need the registration number and current odometer reading to do this.

Using ODO your Fleet Provider can assist in managing and reducing maintenance costs, tyre costs ensuring you keep your vehicles on the road and running efficiently. You can even see the true value of your vehicle today.

If you take the telematics option, then that visibility includes location of your vehicles and tracking of all the journeys made. ODO works on tablets and phones so you don't have to be in the office to use it.

For driver licence checks things couldn't be simpler. Once your driver details are loaded the system will email the drivers, once they complete a DVLA validation process can authorise you to check their licence as long as they stay in your employment. The checks are done directly with the DVLA (no involvement from you or your drivers) and you will get a licence check history for compliance and alerts when drivers get penalties or disqualifications.

Saving Money

Saving money with your fleet starts with selecting the right vehicle for the job understanding the real cost of ownership.

Cost of ownership, known as the Total Cost of Ownership (TCO) is used by ODO to provide a vehicle selection tool. The standard data supplier for the UK vehicle industry is CAP-HPI and ODO includes a full set of their data which is kept up to date. ODO uses this to calculate the TCO by looking at the depreciation, the costs for maintenance, tyres, fuel and road fund licence you can expect then adjusting these for blocked VAT (VAT you cannot reclaim under current legislation) and corporate tax impact. You might be surprised how much different vehicles really cost!

You can then save time by configuring the exact vehicle you want in ODO, because it uses CAP-HPI option rules the vehicle will have a set of options that is valid for the dealer. Your Lease Broker can then find you the best deal for this and all the buying delivery process can be managed in ODO.

Your Fleet Provider can work with you on both new vehicles and your existing fleet using ODO to manage all vehicle related spending reducing costs, saving you time and letting you see actual costs. ODO also tracks the mileage updates on your vehicle and predicts the end of contract mileage. This means you get early warning if you are going over or under planned contract distance allowing avoidance action.

Perhaps you pay drivers business expenses to use their own vehicles. These are known as grey fleet vehicles and you have liabilities for compliance on these as well.

ODO can help here as well, driver licence checks can run for grey fleet drivers just as they do for owned vehicles. You can also require the drivers to supply copies of MOT's and Insurance certificates. These are all stored in ODO and can be prompted by the system. From early in 2019 your drivers can use the ODO App to manage documents, trips claim and accident reporting with photographs, all from their mobile phone or tablet.

With ODO you gain complete visibility and remove the headache of managing your fleet and driver compliance.

ODO is:

Experienced

ODO is not your typical start-up, our parent company is an Oracle Gold Partner with millions of pounds behind it and a team of highly experienced professionals who are immersed in technology and the world of automotive fleet and mobility.

Established

ODO is a new application, but it comes from a company with a long and successful history in fleet and vehicle asset management. The company, DRIVE Software Solutions, has been at the forefront of fleet technology since the mid-90s.

Global

We deal with organisations ranging from single user SMEs, to some of the world's largest banking companies in over 55 countries around the world. It is that experience which forms the foundation of ODO and delivers the smartest way to manage your fleet.

Trusted

Think you have a lot of cars and vans? One of our customers has a fleet of over 850,000 vehicles based in thousands of different locations all around the world.

Easy as P11D

Using the data from ODO, we make many things easy to report on including regulatory and staff forms such as P11Ds. From over 35 million vehicle records, we make finding the right one as easy as entering the registration number.

Risk management isn't a grey area

Driving can be a risky activity at the best of times and accidents will occasionally happen, even to careful responsible drivers. As a business you need to know that people who are driving for you, even occasionally as part of their job, have roadworthy, properly insured vehicles. ODO is designed to help you stay on top of that grey fleet risk, so your drivers stay the right side of the law.

Clear and simple management

We have worked hard to deliver a simple interface and dashboard that gives you the most important information as soon as you log in.

Documents all in the right place

A fleet of vehicles and drivers generates a whole ecosystem of important documents that the fleet manager, business owner or driver may need to be able to access in a hurry. ODO is designed to help you store all those documents like insurance certificates, permits and VE103 forms against the vehicles and drivers that they relate to.

Access control

With ODO you can allow users access to their part of the system, such as the driver interface. From your dashboard you can request information and track who has complied with the request knowing they are only seeing their data.

Keep it in the family

So, you have a few company cars on your fleet, one car, one driver, right? How hard can it be? Well, if you give people company cars, are their husbands, wives, partners, significant others allowed to drive them too? If they are, you absolutely need to stay on top of who's able to drive what, if only to cover yourself for insurance purposes. ODO is set up to make it really simple to see who is authorised to drive what vehicles and if they have a suitable, valid licence too.

Regain control over fuel, maintenance, buying and selling

Nothing has the potential to blow through money quite like a poorly managed fleet of vehicles and drivers. Whether it is old school fuel fraud, tyres being fitted to other people's cars or garages over charging for service and repairs. ODO puts you in full control.

Fleet or driver and vehicle administration is made simple with ODO

Goodbye spreadsheet. Hello ODO

One application to manage them all

As a professional fleet manager, you are fully aware of your responsibilities and all of the things your drivers need to be asked to provide. Similarly, as a professional, you will know that a spreadsheet and a bunch of unconnected file folders is a recipe for missing stuff. With ODO you take full control of your vehicles and drivers with everything in one secure, organised application.

Access control

With ODO you can allow users access to their part of the system, such as the driver interface. From your dashboard, you can request information and track who has complied with the request knowing they are only seeing their data.

Faster and easier to use

Administering a fleet makes for lots of, erm, administration. Even if you have a relatively small fleet you can tie yourself up for hours tapping away at the keyboard just recording names and numbers. ODO will do that for you, just copy and paste registration numbers into our handy loader facility and ODO will run off and search the CAP and DVLA databases to fill in all the boring but essential details for your fleet.

Never let a customer down Keep your fleet on schedule

If you own your vehicle or if you lease them, it is really important that you keep them serviced and maintained. They will run better, use less fuel and be more reliable if you do. Also, leasing companies get really upset and make additional charges if you return vehicles at end of contract that have missed services. Uniquely ODO contains the full CAP database, which means ODO automatically knows about service schedules, so if one of your vehicles needs an oil-change, ODO will let you and your drivers know.

Never miss a MOT or Service

As the owner of a business you have enough things to deal with, with ODO you can tick fleet management off the list. ODO tells you all the important things you need to know about your vehicles and drivers and will send you timely notifications and reminders when stuff needs doing.

Are your drivers legal?

Not having a licence makes your insurance invalid, so use ODO to regularly check your drivers and ensure any risk to the public and your business is as low as possible.

Simple reports on drivers and vehicles

Quickly generate reports from ODO on drivers and/or vehicles. Our simple reporting tool allows you to export a range of the most commonly requested reports of fleets such as MOT and RFL dates through to the last time a driver's licence was checked.

ODO makes it simple

ODO allows you to delegate responsibilities on one platform. This simplifies the process and ensures vehicles are replaced efficiently and are managed from a common dashboard.

Using current valuation data, you can see what your assets are worth and if you are paying too much for replacement nearly new assets.

As a vehicle the owner the liability for fines and penalties is with you. Disposing and de-fleeting the vehicle quickly in ODO means that the new owner picks up the fine or penalty rather than you.

ODO pricing

ODO offers a per vehicle pricing plan related to your actual fleet needs Our product has all the features needed to manage your fleet and options you may need to reduce risk:

- 👁️ Automatic DVLA licence check - Points and bans that could invalidate your insurance
- 👁️ Grey Fleet - Vehicles used for business, owned and maintained by the driver
- 👁️ In built Telematics
- 👁️ Total Cost of Ownership Module

These options can be added to your plan.

Talk to your fleet provider who will be able to advise you on the best options for your fleet and will be able to get you up and running with ODO.

Your fleet provider uses ODO to support you as his customer and to ensure you capitalise on the best functionality available for a fleet operator.

Let's make it as automated and as simple as possible, you have more important things to be doing with your time.
