Tactical Armored Command & Control Shelter
Advanced HQ facilities for high-performance Command & Control on the battlefield

Complex military operations often require an advanced command and control (C2) work environment to support the commanders and staff in challenging field conditions. Elbit Systems offers a versatile, standalone and cutting-edge armored tactical shelter to support integrated and coordinated C2 operations in various combat scenarios.

The Tactical Armored C2 Shelter is a fully contained, autonomously operated and rapidly deployable HQ unit that hosts software, hardware, communications, life support systems and work stations. The shelter is uniquely designed to support various C2 capabilities at all command levels - from high-echelon command centers to tactical maneuvering HQs deployed close to enemy lines. The tactical shelter can operate as a standalone operation center or as part of a mobile tactical HQ.

The C2 shelters are field-proven and already in wide operational use in defense forces around the world.
Tactical Armored Command & Control Shelter

Advanced HQ facilities for high-performance Command & Control on the battlefield

**Improved operational efficiency:** An advanced C4I-oriented workspace provides a convenient environment for continuous and reliable battlefield command and control. The shelter integrates C4I HQ infrastructure and communication, software and hardware systems to support improved military workflow and coordination in all scenarios.

**Rapid deployments and autonomous operation:** Highly modular, Elbit Systems’ field headquarters and its components are immediately deployable, with its levels of mobility adapted for a variety of operating scenarios. The shelters are fully self-contained and self-supporting, with the ability to work independently or as a part of tactical HQ, whether on-the-move or on-the-halt.

**Fully equipped command shelter:** Each shelter can operate independently on the basis of a local server, providing tactical communication between HQ and deployed forces. The structure features versatile workstations that include computing, telephony, radio communication and cutting-edge multimedia equipment, providing advanced virtual conferencing and collaboration capabilities. The shelter contains the infrastructure, energy, and air conditioning to support an independent and continuous work environment.

**Enhanced survivability:** The Tactical Armored C4I Shelter provides operational continuity against a wide range of threats, enabling safe operation close to the line of fire. The structure features a perimeter protection system, full interchangeability of components in the event of damage, and the ability to reduce the electromagnetic signature.

### Key Features
- Fully equipped C4I shelter
- Autonomous operation
- 12 versatile workstations
- Full connectivity
- Highly modular and mobile
- Rapid deployment and dismantling
- Enhanced protection features

### Key Benefits
- Supports continuity of command
- Improves survivability
- Delivers rapid operational readiness
- Provides varying levels of armor protection
- Logistics and energy independent for 72 hours
