

# iOS Developer

## Are you our missing piece?

Standing against the shallow dating industry since our 2019 launch, Jigsaw is the anti-superficial dating app. We're on a mission to stop singles taking each other at face value, encouraging them to look beyond selfies and instead into each other's personality.

In London alone, our app has covered hundreds of thousands of faces with puzzles, revealed piece by piece through millions of message exchanges. Still, one city is just the beginning. 2020 saw us launch in America - the next step in shifting dating mindsets and behaviour globally.

High standards of UX are a must as we compete with multi-million-user companies. As an agile start-up, we have the opportunity to innovate past these slow-movers with data-driven, fast-thinking decision making. As our lead platform, the iOS application is the home and test-bed for new features and industry innovation.

As an iOS developer, you'll be at the cutting edge of its development, creating the gateway between the online and offline dating experience for those seeking a less superficial way to date.

### Our app:

<https://apps.apple.com/gb/app/jigsaw-chat-reveal-date/id930197933>

### The Role:

We are looking for a developer to join the iOS team and help drive the app forward in pursuit of success in the US. You will be responsible for building new features in a clean, well-architected way. You will also share the responsibility of releasing new versions to the App Store. At Jigsaw, you will be working in a small, highly motivated team who work hard for one another to deliver quality experiences to our users. We are looking for someone who will thrive within the environment we have created and who has a passion for developing great software.

## You:

- Demonstrable experience producing and releasing high quality iOS apps.
- Natural communicator – able to communicate technical solutions clearly.
- Love of problem-solving & creating new technology.
- Confident in collaborating across the business.
- Desire to develop yourself and keep up with trends.
- Experience in working effectively with teams remotely.
- Excellent organisation skills.

## Required skills:

- Expertise in Swift and Cocoa Touch. Experience using SwiftUI in production.
- Design patterns and principles such as VIPER and OOP.
- Git.
- RESTful web services.
- AB testing.
- Knowledge of Apple's Human Interface Guidelines.
- Caching, threading, and performance tuning.

## Desirable skills:

- Experience in test driven development (TDD).
- Machine learning (facial detection and recognition).
- Additional programming languages (ideally PHP / Kotlin).

## Us:

- Competitive salary.
- Super-flexible working weeks.
- Quirky, relaxed working environment.
- Remote working encouraged - 1 office day a week/4 days remote.
- Regular socials, celebrations, and lunches.
- Monthly 'treat yourself' budget.
- Growth development coaching sessions.
- Tech weapons of choice.
- Use of most up to date iOS technologies.

## How to apply:

Send your CV to: [ted@jigsaw.co](mailto:ted@jigsaw.co)
