

Software Engineer – DraftKings

Boston

Software Engineering at DraftKings has it all to offer. All of the buzz words apply ... big data, performance at scale, consumer facing web and mobile. The project work is intellectually challenging. The culture is collaborative. The tech stack is current. You'll work with a small, collaborative team using cutting-edge technology in every tier. You will deliver solutions that are used by millions of users on daily basis. Working in small teams or independently, you will have the autonomy to take projects from concept to production engaging cross-functionally with stake holders while having the benefit a top notch engineers to leverage when needed.

Qualifications:

Full Stack Object Oriented web development experience

Experience delivering object oriented solutions preferably working across the full technology stack in a web environment. We'll consider all profiles but our stack is C#.NET, SOA, HTML, SASS/CSS, jQuery, SQL (SQL Server and MySQL) with Bootstrap in web tier to MongoDB and RabbitMQ.

Design ... experience building complex applications that perform well at scale. Ability to understand how components interact in a larger systems and design your solution accordingly. Ability to choose the right data structure and/or algorithm for the task at hand to deliver an efficient solution.

Passion ... You love this stuff!!!

Culture ... We're incredibly proud of the fun, collaborative and merit oriented environment that we've built. There's a very limited hierarchy and no room for egos here. Everyone here learns from their coworkers and teaches something every day with an enthusiasm for delivering a great product.

There's so much more to tell ... if you're curious enough to learn more just reach out to us!!!!
