

Oscar Insurance

Software Engineer: Android

Oscar engineering is building modern software to provide an innovative and unique healthcare experience. Our mobile engineers are at the forefront of the movement, reimagining the way people interact with their health insurance in the real world.

Sample Projects

- Bluetooth integration with third-party fitness trackers
- Pixel-perfect insurance cards
- Telemedicine integration so members can talk to doctors 24/7
- Health timeline containing information about past doctor visits, prescriptions, customer service messages, and more
- Find detailed information on thousands of doctors and drugs
- Route members to the appropriate care based on medical condition

Our Ideal Candidate

- Has experience with native Android development
- Writes efficient, readable, and maintainable code
- Thinks deeply about best practices, design patterns, and good architectural decisions
- Has a keen eye for design
- Cares deeply about the user
- Enjoys working closely with product, design, and other engineering teams
- Is passionate about exploring and leveraging new technologies
- Understanding of web technologies and API design are a bonus
