## 2016 Winton Analyst Programme Research

The Research stream of the Winton Analyst Programme offers you the opportunity to gain experience and develop skills at the forefront of quantitative finance. You will work alongside highly motivated quant research professionals on challenging data-driven projects related to our investment and research activities.

### More about the programme

You will complete three six-month placements across teams in research and other areas of the business to gain a broad understanding of how Winton works.

Placements are available in our London, Oxford, Zurich and New York offices.

Your placements will be complemented by a schedule of lectures, workshops and social events to support your learning and skills development.

#### Things you might work on include:

- Analysing financial markets data sets to support trading
- Building predictive analytics in a wide range of application areas
- Processing a wide range of disparate data sets for use in research and trading
- Developing software applications to solve business problems and enhance our offering to clients

### Am I eligible?

#### Requirements:

- An MSc/PhD degree in an applied science from a top tier university
- An exceptional research background with strong evidence of high levels of educational attainment
- A desire to work in a scientific research environment with an emphasis on collaborative work
- A flexible approach to problem solving with a desire to learn
- A good foundation in statistics and ideally previous experience of analysing real world data

### How do I apply?

Please note that the application process for the 2016 programme is now open.

Please visit the [Opportunities](#) page to apply.
