

2016 Winton Analyst Programme

Technology

The Technology stream of the Winton Analyst Programme offers you the opportunity to gain experience and develop skills at the forefront of quantitative finance. You will work alongside highly motivated algo trading technology professionals on software development projects to support our research, trading and operations.

More about the programme

You will complete three six-month placements across teams in technology and other areas of the business to gain a broad understanding of how Winton works.

Placements are available in our London, Oxford and New York offices.

Your placements will be complemented by a schedule of lectures, workshops and social events to support your learning and skills development.

Things you might work on include:

- Applications to acquire, process and clean large sets of financial and non-financial data
- Parts of our automated trading pipeline from data acquisition to order generation and execution
- Post-trade applications to process and book our trades

Am I eligible?

Requirements:

- A BSc/MSc/PhD in Computer Science or related from a top tier university
- A desire to work in a dynamic technology environment with an emphasis on delivering outstanding solutions for business requirements
- Previous professional software development experience or as part of open source projects
- A flexible approach to problem solving with a desire to learn
- Knowledge and experience of modern software engineering practices

How do I apply?

Please note that the application process for the 2016 programme is now open.

Please visit the [Opportunities](#) page to apply.
