

Description

Front End Developer

Help us create beautiful new solutions to some of our toughest non-trading technology problems. We're looking for a front end web applications developer to work on a series of new applications and UIs for our business teams. Your projects could range from coming up with a new visualisation for a data set, creating a new UI for established research/trading applications, to building a new web solution for a nagging business need.

Creating initial prototypes quickly will be key and you'll be working with senior executives in our Technology group as well as business teams across the company. You'll own the entire project lifecycle from conceptualisation to implementation and release.

Responsibilities

- Progress projects from initial specifications to fully developed, production-ready applications
- Design, develop, test and maintain web based applications and prototypes
- Build modular and re-usable UI components and widgets
- Create aesthetically superior and functional UIs
- Producing detailed documentation for program operation
- Modify and maintain existing software and generic internal applications

Requirements

- Proven track record of designing experiences for complex, data driven web and mobile applications
- Strong visual design skills and sensibilities
- Strong UI development ability
- Self-motivated and enthusiastic
- Proficiency in rapid prototyping
- Ability to articulate design decisions and advocate for the user
- Experience working on agile projects

Technical Skills

- HTML5, CSS3, JavaScript (TypeScript would be a bonus but not essential)
- Photoshop, Sketch, Balsamiq or other visual design, wire framing, and prototyping tools
- Awareness of Angular JS, bootstrap, Material Design
- Awareness of build tools such as Webpack, Gulp or Grunt
- Some C#, Java or similar would be great
