

CAMPBELL NORTH

C# SOFTWARE ENGINEER

Specifics

Company: Winton Capital Management

Category: Technology

City: London

Last Updated: Monday, March 30th 2015

Salary:

Description

Engineering at Winton

Our engineering group is a core team responsible for data, modelling, order management and execution. If you like working closely with the users and seeing the impact of your work, come join us.

Front Office Team

The front office team develops order management and execution applications for Winton's trading pipeline. The software trades billions of dollars' worth of portfolios across multiple asset classes. Our software is scalable and robust.

OMS Developer

We are hiring for a position in our front office team to work on the order management system. We are looking for motivated, intelligent and inquisitive software engineers with a particular talent for C# development. This team will develop the entire workflow across many disciplines: capacity, robustness, coverage and monitoring.

Responsibilities

- Design, develop and maintain high quality software.
- Solve complex problems – find the best and most efficient solution, design model or design process.
- Develop core operational infrastructure including trading, portfolio, algorithmic execution, accounting and risk applications.
- Facilitate the growth of the firm's evolving business by creating robust and scalable technical solutions.

Requirements

- Strong programming skills in C#.
- Knowledge of software engineering practices, for example testing frameworks, methods such as Scrum, Agile, design patterns, dependency injection.
