Junior Software Engineer

Are you our missing piece?

Saving singles from superficial dating and Mashable’s ‘#1 alternative to Tinder’, Jigsaw is the dating app that prioritises your personality. By revealing faces behind a puzzle, over 100,000 members (and counting) have connected based on more than just their looks, creating relationships that last beyond the honeymoon phase.

Our tech-for-good platform aims to be one of the strongest lifestyle brands on the App Store, underpinned by a social media presence that makes daters across the U.S love Jigsaw puzzles more than they ever thought possible.

As a Junior Software Engineer, you’ll be at the cutting edge of Jigsaw’s evolution, building features to bridge the gap between the online and offline dating experience for those seeking a less superficial way to date.

Our Apps

https://apps.apple.com/gb/app/jigsaw-chat-reveal-date/id930197933

The Role

We are looking for an engineer to join our team and be a key figure in our expansion within the US. You will be responsible for building new features in a clean, well-architected way, across all of our platforms. At Jigsaw, you will be working in a small, highly motivated team who work hard for one another to deliver quality experiences to our users. We are looking for someone who will thrive within this environment and who has a passion for developing great software.

You

- Demonstrable experience producing and releasing code.
- Natural communicator – able to communicate technical solutions clearly.
- Love of problem-solving & creating new technology.
- Confident in collaborating with others across business disciplines.
- Desire to develop yourself and keep up with trends.
- Experience working effectively with remote teams.
- Excellent organisation skills.
Required Skills

- Experience in any of the following languages:
  - Swift (iOS)
  - Kotlin (Android)
  - PHP (Laravel)
- Knowledge of design patterns and principles, such as OOP, SOLID and TDD.
- Experience in Git source control.
- Knowledge of consuming or building RESTful web services.

Desirable Skills

- Knowledge of more than one of the required languages
- An understanding of machine learning, specifically facial detection and recognition.
- Knowledge of Apple’s human interface guidelines and Google’s material design guidelines.

Us

- Competitive salary (referenced to GlassDoor, Jan ‘22) + Bonus Scheme
- Shares in the company (which may one day be worth $$$)
- Monthly date budget (single or taken)
- Tech weapons of choice
- Guidance, development plans and investment helping you grow
- Quirky & relaxed office in the Manchester city-centre (with dogs)
- Three days in the office, two days WFH (we’re all sick of zoom)
- Regular team socials, celebrations, and home-baking competitions
