

A level summer school for newly qualified science teachers

Starting out to teach A Level for the first time as an NQT can be daunting.

Summary

This course will support participants with developing students' practical skills, as well as dealing with the tricky bits of the A Level curriculum. Participants will split into chemistry, physics and biology groups, so they will receive two days of intense support within their own subject.

Participants will benefit from both highly experienced A Level teachers and ongoing support beyond the course. We will provide high-quality resources, as well as ample opportunity to practice practical and class activities.

By the end of the course, participants will:

- ✓ understand key misconceptions students may have within their subject
- ✓ practice core practical skills required for A Level
- ✓ identify ways to engage students with more challenging part of the A level course

Course fee

£640 +VAT

Course date

20 August 2020

Bursary

Bursary of £940 available to maintained schools in England
