LM1V overview

LM1V is an analogue modeled brickwall limiter, with 8x oversampling, and inter-sample peak detection. It is able to achieve high loudness levels with the minimum of distortion. Results are always extremely musical.

Separate attack, release and stereo link controls, allow a wide range of settings, from near clipping to smooth limiting, all without excessive pumping or artifacts. While inter-sample peak detection, catches overs to keep output levels firmly in place. LM1V is equally at home processing individual tracks as it is on the mix bus.

System requirements

Windows: Windows 10 64bit

OSX: OS X 10.9+ 64bit Intel and ARM

Formats: VST2, VST3, Audio Unit, AAX

Installation

Download the latest installer from <http://www.mellowmuse.com/LM1V>.

Without a valid license the plugin will run in demo mode, inserting silence in the audio output at random intervals.

Authorize online

On purchase you will be emailed a serial number. With an active network connection in place, load the plugin in your DAW and click the info (i) button in the bottom right hand corner. Enter the email address you used when purchasing and the serial number. The plugin will connect with our server to authorize.

Authorize offline

You can also login and download your license files via our user area at: <http://www.mellowmuse.com/user>. Unzip the downloaded xxx.lic file and place in the following folder:

Windows: /Program Files/Mellowmuse/Licenses

Macintosh: /Library/Application Support/Mellowmuse/Licenses
