CELLBANKER® CRYOPRESERVATION

Survival rate of
all cell types*

CELLBANKER® is a series of easy-to-use cell freezing media offering superior protection against cell stress during freeze/thaw cycles, allowing successful cryopreservation of all mammalian cell types regardless of their sensitivity.

Available in several formulations to suit your research needs, the CELLBANKER® cryopreservation range delivers high rates of cell viability, and reduces post-thaw necrosis and apoptosis, improving cell function and recovery.

CELLBANKER® SERIES

Discover the advantages of CELLBANKER®:

- Consistently high cell viability post thaw (>90%)
- No programmed freezer or liquid nitrogen required
- Long shelf life
- Tested on many cell types
- Freeze directly in -80°C freezer
- Allows viable long term cell storage > 10 years at -80°C or -196°C
- Ready-to-use formulas avoid mixing of DMSO and filtration

CELLBANKER® 1

CELLBANKER® 1 is a ready-to-use serum containing cell cryopreservation medium designed for a broad spectrum of mammalian cells. This unique formulation allows for stable cryopreservation and high viability after freeze-thaw cycles, even for sensitive cells.

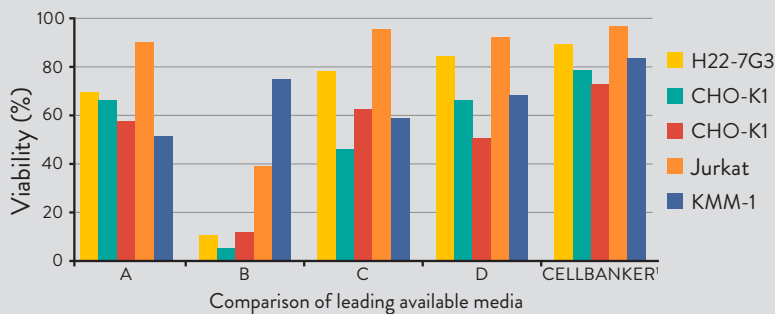

CELLBANKER® 2 is a serum-free cell cryopreservation medium optimised for serum-free cultured cells and peptide/protein expressing cells. CELLBANKER® 2 offers a low cost-animal free cryopreservation media for all applications where risks of contamination must be avoided.

CELLBANKER® 2

Typical cell recovery rates for CELLBANKER® 1 and 2

Cell Type	Preservation Period (year)	Viability of cells (%) at -80°C
Fibroblasts	5	90
Caco-2	5	90
K562	5	90
Jurkat	10	90

Viability Comparative Trial (-80°C, 1 Year Storage)

Comparative Analysis of CELLBANKER® 1 vs. conventional cell cryopreservation method.

The unique formulation allows for stable cryopreservation and high viability after freeze-thaw procedure, even for sensitive cell lines.

STEM-CELLBANKER®
GMP grade

Available DMSO Free

STEM-CELLBANKER® is a chemically defined freezing media optimized for stem cells and iPS cells storage, as well as fragile primary cells. Furthermore, recent data supports its ability to cryopreserve organoids and tissues to allow the recovery of viable cells.

STEM-CELLBANKER® GMP grade is manufactured in compliance with JPN, EU, US, and PIC/S GMP guidelines. Free from animal derived components, and contains only chemically defined USP, EP and JP grade ingredients.

A Drug Master File for STEM-CELLBANKER® has been registered with the Food and Drug Administration (FDA) (MF# 15785).

Available in both DMSO containing and DMSO-Free formulations, STEM-CELLBANKER® is an optimal freezing solution for basic research and clinical application of cell therapy products.

STEM-CELLBANKER® vs Conventional freezing

Cell viability assessment: trypan Blue & calcein-esterase based live-dead assay.

Result: Significantly higher cell viability was observed while cell pluripotency, normal karyotype and proliferation ability were maintained in HS293, HS306 and ChiPSA cell lines.

Study by Department of Clinical Science, Intervention and Technology, Karolinska Institute.

STEM-CELLBANKER®
EX GMP grade

New product

STEM-CELLBANKER® EX is a serum free and xeno free, sterile DMSO-containing cryopreservation solution which consists of ingredients already approved in the manufacture of cell therapy excipients.

STEM-CELLBANKER® EX is optimized for cryopreserving human adipocyte-derived mesenchymal / stem cells and human hematopoietic stem cells.

Cryopreservation performance test using Adipose-Derived Stromal/Stem Cells (ADSC) in STEM-CELLBANKER® EX

(A) Cell Viability immediately after thawing cryopreserved cells.

(B) Cell numbers were analyzed after thawing and overnight incubation.

(C) Cell proliferation was evaluated after thawing and culturing for 72 hours.

In summary: High cell viability and maintenance of cell function of STEM-CELLBANKER® EX cryopreserved cells after thawing

HSC-BANKER®

HSC-BANKER® is an optimized GMP grade cryopreservation medium for hematopoietic stem cells.

With a simple formulation HSC-BANKER® also offers the potential to be used as excipient in cell therapy delivery.

Studies show that the HSC-BANKER® is at least equivalent to conventional protocols using DMSO and DEXTRAN.
