Facial Treatments

Galvanic*

The Galvanic facial improves your skin in two ways. Firstly a removal of blockages through a deep cleanse followed by a tailor made gel to be pushed into your skin to focus on the skins individual needs. This facial is designed for anyone wanting to improve overall skin texture and appearance.

Vacuum Suction

Specialist treatment to help improve fluid retention and circulation within the skin. Your facial will be performed using a ventouse to glide over the skins surface to drain fluid to the nearest lymph nodes. Also an excellent treatment to assist in the removal of blocked pores.

High Frequency*

Have a choice of either direct or indirect high frequency facial treatments.

Indirect high frequency is designed to warm and relax skin tissues, increase circulation and improve moisture balance in the skin.

Direct high frequency assists in helping to destroy bacteria present on the skin to improve problematic skin types. During your electrical facial your therapist will use Decleor products and specialist equipment to suit your particular needs; e.g. facial toning, cell regeneration or the removal of impurities. For best results, we would recommend a course of six treatments over a period of six weeks.
