

BREAKTHROUGH in LAMINATION!

Fully automated operation will dramatically save time and costs.
Large volume of encapsulation or exact size lamination is possible with one touch.
The next generation of the innovative ALM3220.

ALM3222

AL-MEISTER®
ALM3222
Auto Laminator

Max. Processing Speed

270 sheets/hour
(Based on A4 size)

High Performance Automatic Feeder

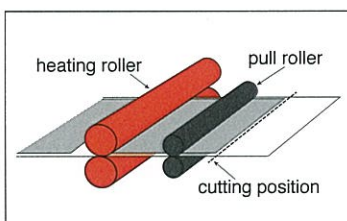

The advanced automatic feeder enables loading of up to 200 sheets. Newly innovated anti-skew mechanism enables to detect paper skewing and automatically collects it. Thus the paper feeding becomes more stable for an excellent lamination. At the same time the operator's work is now markedly reduced.

Excellent Heating Roller System

Heating system is graded up to Heating Roller from Heat Shoe. Combined with high performance heater, it can control temperature perfectly for smooth and flawless lamination.

Fine Mode

Fine Mode adopts a new technology of reducing roller marks, which have already been acknowledged in some operations. Four different levels are available according to paper type and paper thickness.

Automatic Trimming

AL-Meister automatically senses the size of the paper and selects the proper size. There are two modes. Trimming with margin, which guarantees durability and lamination waterproof, and the trimming without margin, which is suitable for surface treatment. The modes can be easily changed. The margin amount is adjustable.
