# Signals + Editorial Manager®

Overburdened with time-and skill-intensive article screening and rising research fraud, editorial teams risk delays to publication, Reviewer fatigue, and expensive retractions.

The seamless integration between Editorial Manager® (EM) and Signals Manuscript Checks offers publishers an advanced research integrity solution designed to deliver accurate, relevant, and transparent analysis of manuscript credibility – protecting journals and the scholarly record.

Integrity Intelligence

- ✓ Leverages expert input, metadata analysis, and data networks to catch problematic manuscripts early in workflow

- ✓ Includes Sleuth AI assistant to support interactive investigation, targeted queries, and rapid issue detection

- ✓ Adapts to publisher workflows by developing new signals, adjusting thresholds, and continuously incorporating new data

Comprehensive Checks

- ✓ Evaluates the manuscript, Authors, institutions, citation network, metadata changes, and other journal-specific checks

- ✓ Designates article integrity risk-level and convenient color-coded caution indicators in evidence-based reports

- ✓ Monitors trends and uncovers patterns on a journal or portfolio level through custom publisher dashboards

Safeguard & Streamline

- ✓ Conducts analysis automatically throughout editorial workflow with seamless access to detailed reports for faster screening

- ✓ Supports efficient and informed decisions on submissions early to allow focus on publishing high-quality work

- ✓ Reduces costly delays, alleviates pressure on the editorial desk, and protects journal reputations and standards
