

Dimensions

Research Integrity Suite

Strengthen research integrity. Support confident decisions.

Trust is fundamental to scholarly publishing. Publishers need to be confident in the researchers they work with and the research they publish, while applying robust integrity practices across growing submission volumes and increasingly complex workflows.

Dimensions Research Integrity Suite brings together insight into researchers and manuscripts, drawing on Dimensions' comprehensive research data as its foundation, to help publishers identify potential issues earlier, focus expert attention where it matters, and make informed editorial decisions.

Two research integrity capabilities

Author Check

Understand the researchers involved in the publishing process

Gain insight into the publication and collaboration histories of authors, editors, and reviewers.

Citation Check

Assess citation behaviour within the manuscript

Identify self-citations, assess whether each is justified in context, and receive a clear risk rating.

A broader view of research integrity

Author Check provides researcher-level insight. Citation Check provides manuscript-level insight. Together, they give editorial and research integrity teams a broader evidence base to identify potential issues, investigate with greater context, and make informed decisions.

Author Check

Understand the researchers involved in the publishing process

Author Check helps editorial and research integrity teams assess researchers' publication and collaboration histories and identify potential issues that may warrant further investigation.

Two ways to apply Author Check

- ✓ **Dashboard** | Human-led, on-demand assessment and investigation

Explore a researcher's history and collaboration networks whenever you need additional context, such as for editorial board selection, peer reviewer selection, or post-publication investigation.

- ✓ **API** | Automated checks within your existing workflow

Integrate Author Check into submission and editorial systems such as ScholarOne Manuscripts, bringing researcher-level integrity information into the workflow at scale.

Citation Check

Assess citation behaviour within the manuscript

Dimensions Citation Check analyses submitted manuscript PDFs to identify self-citations, assess whether each citation is justified in context, and provide a clear risk rating.

What Citation Check gives you

- ✓ **Sentence-level detection:** Self-citations are pinpointed to the exact sentence in the manuscript, not just flagged at the reference-list level.
- ✓ **A clear risk rating:** Each manuscript receives an objective rating editors can act on, with a report ready to attach to the editorial record.
- ✓ **Built for volume:** Process multiple manuscripts simultaneously, so checks keep pace with busy submission windows.
- ✓ **Works inside your existing workflow:** Delivered via API, integrating automatically into your submission system.

Support stronger research integrity practices

Dimensions Research Integrity Suite helps publishers move towards more practical, consistent and scalable integrity practices, while keeping human judgement at the centre.

Identify potential issues. Investigate with context. Make informed decisions.
