

## Growing apart can be a good thing

Plant displays to keep your workforce safe: Using nature to create attractive, healthy barriers and demarcation in the workplace.

### Partition large areas

- Reception & waiting areas
- Break-out & canteens
- Open spaces
- Desks & working areas

### Demarcation

- One-way systems
- Hedge mazes for waiting in line
- Rows of plants for seating area barriers

2m SOCIAL DISTANCING

ONE WAY

### Create one-way systems around the workplace

Safely navigate around your workspace using natural divides: a healthier, natural alternative to perspex, guides and ropes.

DEMARCATIION

### Segregate spaces with green demarcation

Our 1m-long plant displays can be used to easily calculate and create 2m demarcations, helping people to maintain social distancing.

### A natural desk barrier

Double-sided moss or planted panels form an unobtrusive, natural barrier without the feeling of separation from colleagues. Moss is a maintenance-free option while live plants provide clean air close up.

### Wellbeing

Bring nature indoors and instantly experience the biophilic benefits of plants. Stress lowers and wellbeing rises when we have nature in our line of sight.

#### Biophilia:

**Our innate need to stay connected to nature**

### Creative green

Use plant displays to design an office maze which encourages a safe flow around your indoor workspace.

### Limit airborne droplet transmission by raising humidity levels

The dispersal of airborne respiratory droplets is greatly reduced in higher humidity. Plants transpire up to 99% of the water they are given, so they are perfect for increasing indoor air humidity levels.

**1 plant for every 3 people improves air quality:**

**Humidity goes up 20%**

### Humidity for health

Increased humidity levels help our immune system by keeping our skin and mucous membranes healthier.

A healthier mucous membrane in the throat and nose helps trap particulate matter and pathogens, preventing their entry into deeper tissues, such as your lungs, as well as reducing sneezing.

It can also help reduce coughing by lubricating the throat.

### Inspiration

We offer a range of plant displays to help your workforce maintain a healthy distance around the workplace.

Unobtrusive and healthy by nature, our designs can take the stress out of the new workplace rules.

**FACT: Plant-filled rooms contain 50-60% fewer airborne moulds and bacteria than rooms without plants.**
